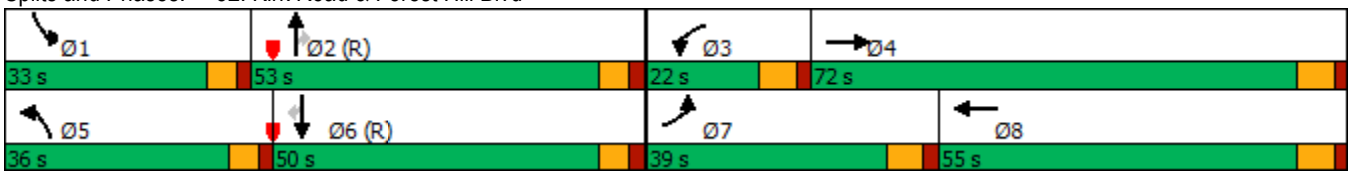
Intersection Summary			
Area Type:	Other		
Cycle Length: 180			
Actuated Cycle Length: 180			
Offset: 156 (87%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 180			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.05			
Intersection Signal Delay: 70.8		Intersection LOS: E	
Intersection Capacity Utilization 91.2%		ICU Level of Service F	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 32: Kirk Road & Forest Hill Blvd

Intersection Summary			
Area Type:	Other		
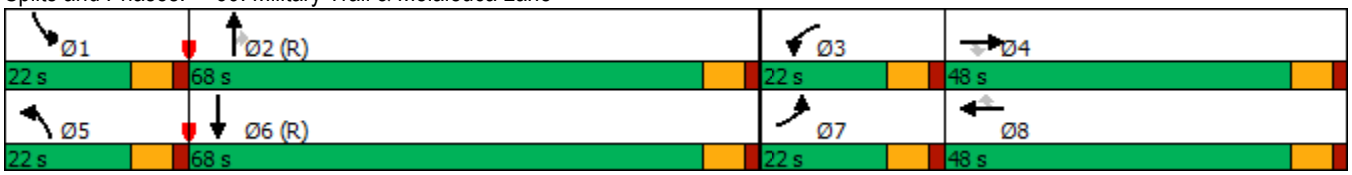
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 51 (32%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.21			
Intersection Signal Delay: 61.7		Intersection LOS: E	
Intersection Capacity Utilization 92.5%		ICU Level of Service F	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

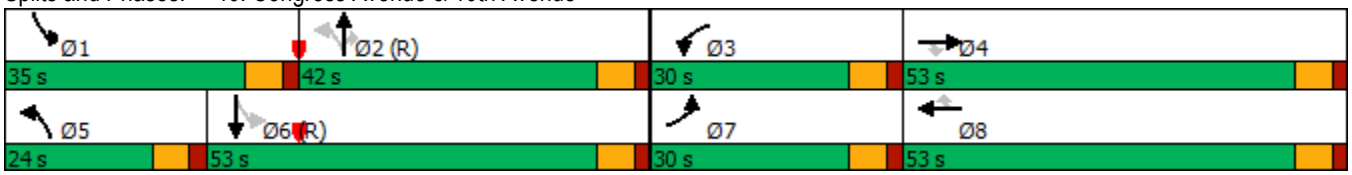
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 44: Military Trail & 10th Avenue

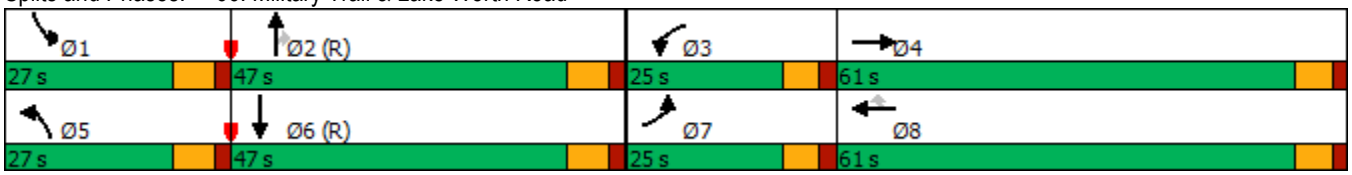
Intersection Capacity Utilization 107.8%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 66: Military Trail & Lake Worth Road

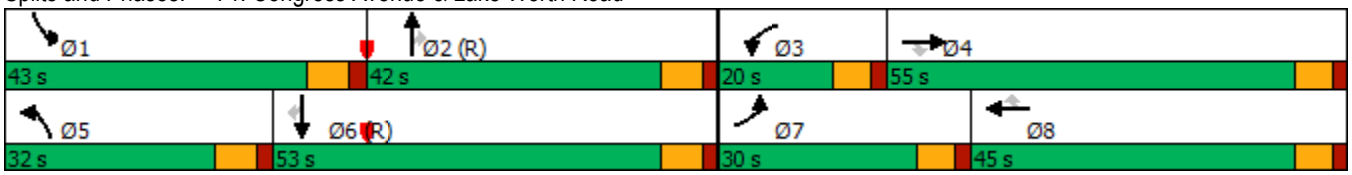
~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 71: Congress Avenue & Lake Worth Road

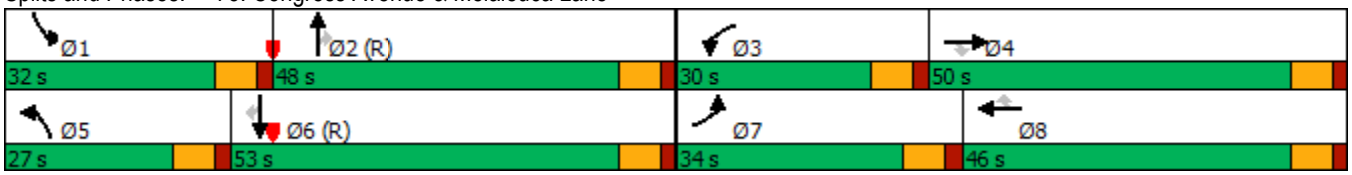
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 96 (60%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.53			
Intersection Signal Delay: 121.8		Intersection LOS: F	
Intersection Capacity Utilization 107.6%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 75: Congress Avenue & Melaleuca Lane

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary			
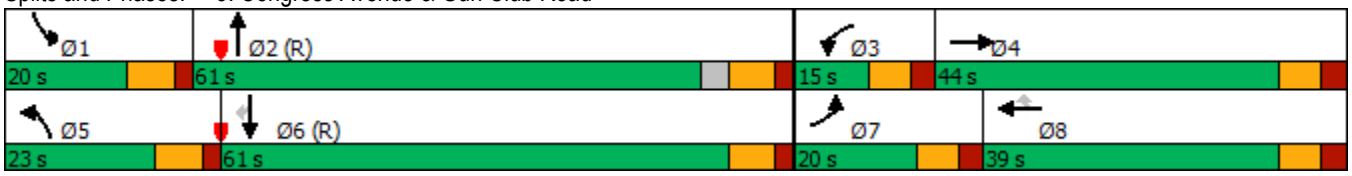
Area Type:	Other		
Cycle Length: 143			
Actuated Cycle Length: 143			
Offset: 66 (46%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 140			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.10			
Intersection Signal Delay: 46.3		Intersection LOS: D	
Intersection Capacity Utilization 83.4%		ICU Level of Service E	
Analysis Period (min) 15			



~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Congress Avenue & Gun Club Road

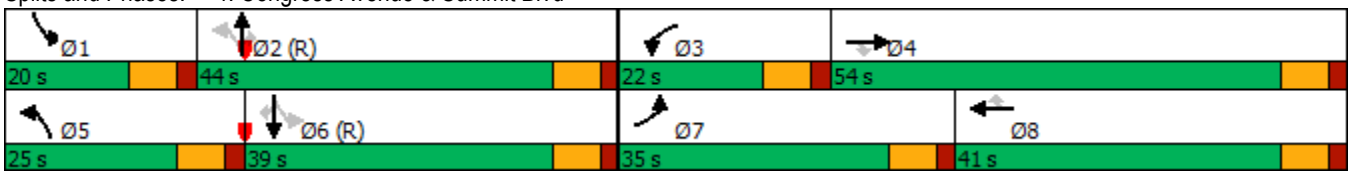
Intersection Summary			
Area Type:	Other		
Cycle Length: 140			
Actuated Cycle Length: 140			
Offset: 123 (88%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.21			
Intersection Signal Delay: 77.7		Intersection LOS: E	
Intersection Capacity Utilization 102.2%		ICU Level of Service G	
Analysis Period (min) 15			



~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Congress Avenue & Summit Blvd

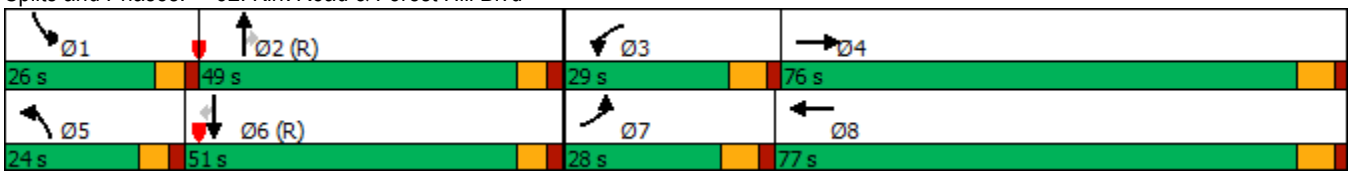
Intersection Signal Delay: 118.7		Intersection LOS: F	
Intersection Capacity Utilization 113.3%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 32: Kirk Road & Forest Hill Blvd

Intersection Summary			
Area Type:	Other		
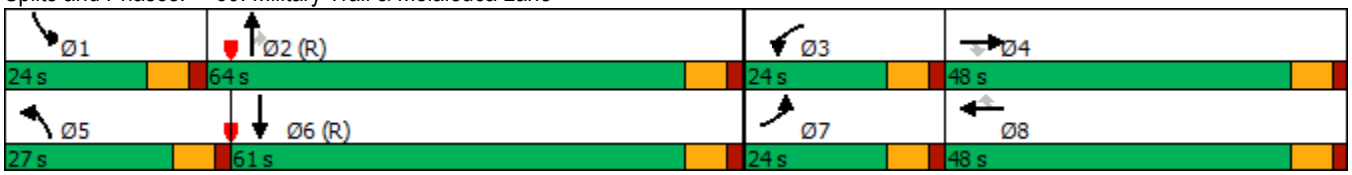
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 30 (19%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.68			
Intersection Signal Delay: 121.4		Intersection LOS: F	
Intersection Capacity Utilization 103.3%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary			
Area Type:	Other		
Cycle Length: 160			
Actuated Cycle Length: 160			
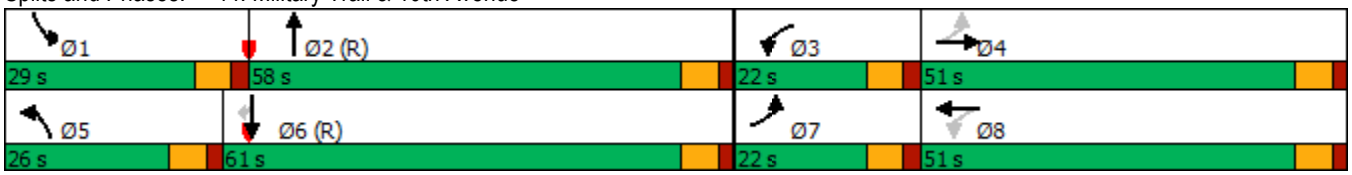
Offset: 149 (93%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.13			
Intersection Signal Delay: 83.9		Intersection LOS: F	
Intersection Capacity Utilization 103.0%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 44: Military Trail & 10th Avenue

Intersection Summary			
Area Type:	Other		
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 64 (40%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 0.98			
Intersection Signal Delay: 58.3		Intersection LOS: E	
Intersection Capacity Utilization 85.3%		ICU Level of Service E	
Analysis Period (min) 15			

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

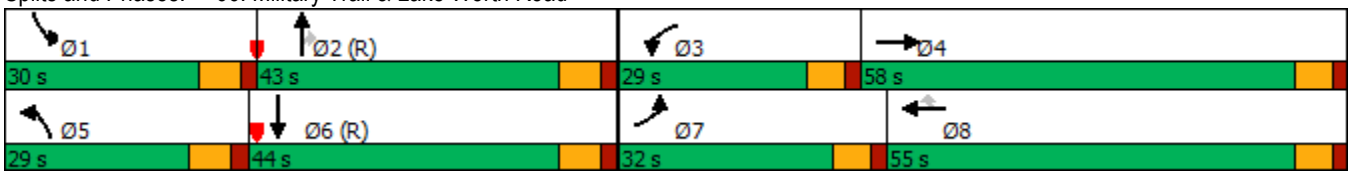
~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

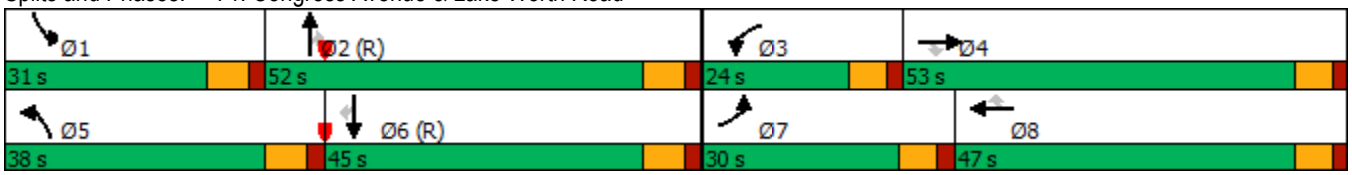
~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 71: Congress Avenue & Lake Worth Road

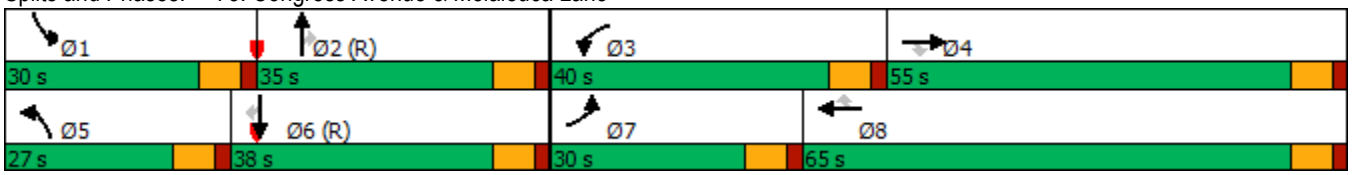
~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary			
Area Type:	Other		
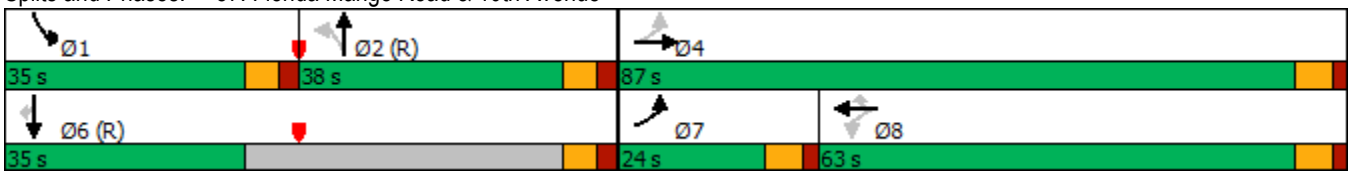
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 50 (31%), Referenced to phase 2:NBTL and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.52			
Intersection Signal Delay: 89.7		Intersection LOS: F	
Intersection Capacity Utilization 80.7%		ICU Level of Service D	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 87: Florida Mango Road & 10th Avenue

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary			
Area Type:	Other		
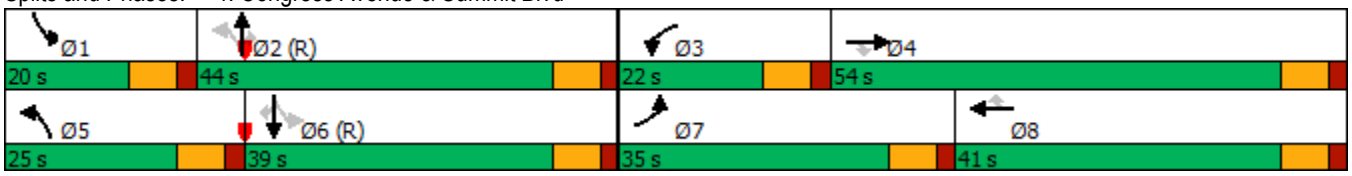
Cycle Length: 140			
Actuated Cycle Length: 140			
Offset: 123 (88%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.27			
Intersection Signal Delay: 89.3		Intersection LOS: F	
Intersection Capacity Utilization 106.1%		ICU Level of Service G	
Analysis Period (min) 15			



~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary			
Area Type:	Other		
Cycle Length: 180			
Actuated Cycle Length: 180			
Offset: 110 (61%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 180			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 0.86			
Intersection Signal Delay: 46.2		Intersection LOS: D	
Intersection Capacity Utilization 103.1%		ICU Level of Service G	
Analysis Period (min) 15			

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

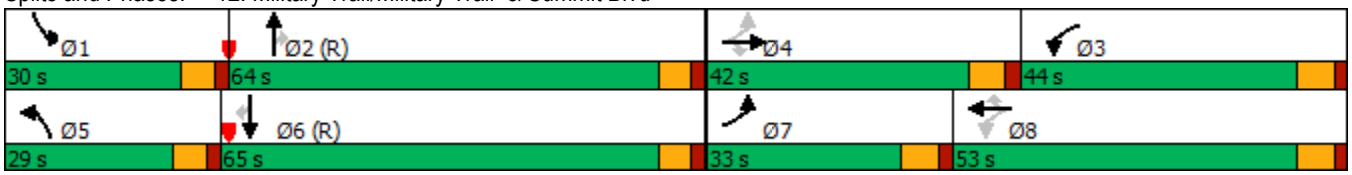
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 32: Kirk Road & Forest Hill Blvd

Intersection Summary			
Area Type:	Other		
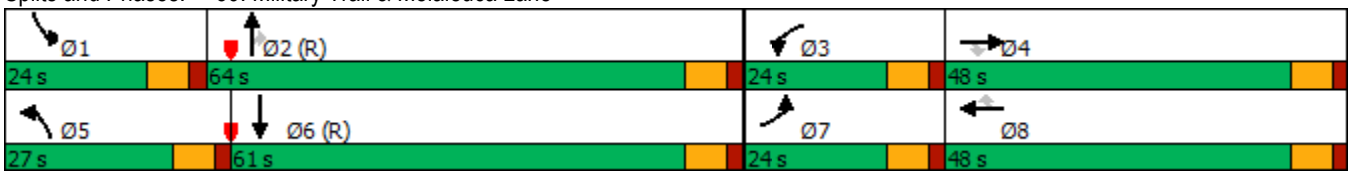
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 30 (19%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.77			
Intersection Signal Delay: 133.5		Intersection LOS: F	
Intersection Capacity Utilization 107.4%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 39: Military Trail & Melaleuca Lane

Intersection Summary			
Area Type:	Other		
Cycle Length: 160			
Actuated Cycle Length: 160			
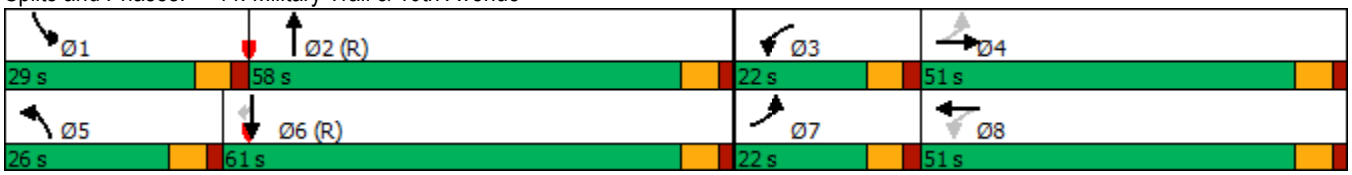
Offset: 149 (93%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.20			
Intersection Signal Delay: 97.8		Intersection LOS: F	
Intersection Capacity Utilization 107.2%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 44: Military Trail & 10th Avenue

Intersection Summary			
Area Type:	Other		
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 64 (40%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.03			
Intersection Signal Delay: 61.3		Intersection LOS: E	
Intersection Capacity Utilization 88.6%		ICU Level of Service E	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 66: Military Trail & Lake Worth Road

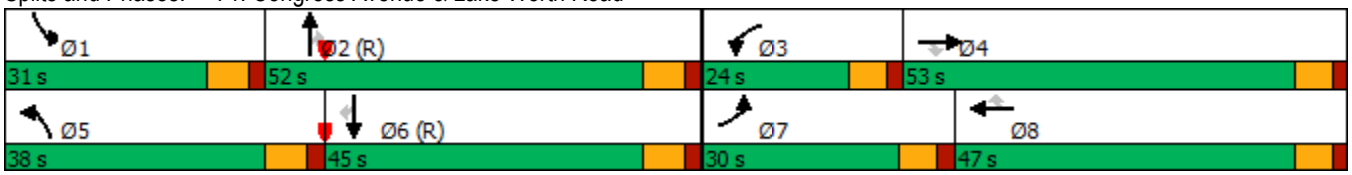
~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

\# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

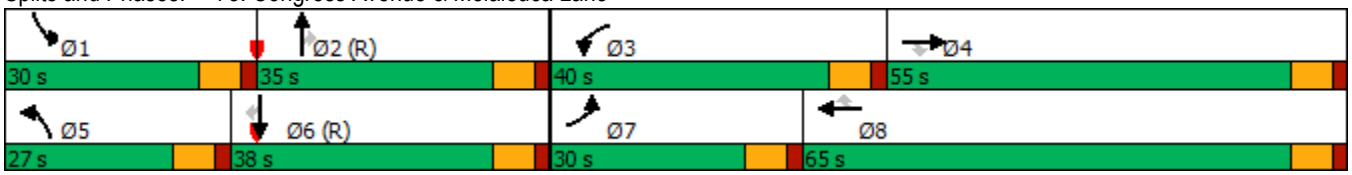
Intersection Summary			
Area Type:	Other		
Cycle Length: 160			
Actuated Cycle Length: 160			
Offset: 144 (90%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 160			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.62			
Intersection Signal Delay: 130.2		Intersection LOS: F	
Intersection Capacity Utilization 109.6%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.



Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 75: Congress Avenue & Melaleuca Lane

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

\# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

TABLE 1

Generalized **Annual Average Daily** Volumes for Florida's Urbanized Areas

January 2020

INTERRUPTED FLOW FACILITIES

STATE SIGNALIZED ARTERIALS

Class I (40 mph or higher posted speed limit)

Lanes	Median	B	C	D	E
2	Undivided	*	16,800	17,700	**
4	Divided	*	37,900	39,800	**
6	Divided	*	58,400	59,900	**
8	Divided	*	78,800	80,100	**

Class II (35 mph or slower posted speed limit)

Lanes	Median	B	C	D	E
2	Undivided	*	7,300	14,800	15,600
4	Divided	*	14,500	32,400	33,800
6	Divided	*	23,300	50,000	50,900
8	Divided	*	32,000	67,300	68,100

Non-State Signalized Roadway Adjustments

(Alter corresponding state volumes by the indicated percent.)

Non-State Signalized Roadways - 10%

Median & Turn Lane Adjustments

Lanes	Median	Exclusive Left Lanes	Exclusive Right Lanes	Adjustment Factors
2	Divided	Yes	No	+5%
2	Undivided	No	No	-20%
Multi	Undivided	Yes	No	-5%
Multi	Undivided	No	No	-25%
–	–	–	Yes	+ 5%

One-Way Facility Adjustment

Multiply the corresponding two-directional volumes in this table by 0.6

BICYCLE MODE[2]

(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)

Paved Shoulder/Bicycle Lane Coverage	B	C	D	E
0-49%	*	2,900	7,600	19,700
50-84%	2,100	6,700	19,700	>19,700
85-100%	9,300	19,700	>19,700	**

PEDESTRIAN MODE[2]

(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)

Sidewalk Coverage	B	C	D	E
0-49%	*	*	2,800	9,500
50-84%	*	1,600	8,700	15,800
85-100%	3,800	10,700	17,400	>19,700

BUS MODE (Scheduled Fixed Route)[3]

(Buses in peak hour in peak direction)

Sidewalk Coverage	B	C	D	E
0-84%	> 5	≥ 4	≥ 3	≥ 2
85-100%	> 4	≥ 3	≥ 2	≥ 1

UNINTERRUPTED FLOW FACILITIES

FREEWAYS

Core Urbanized

Lanes	B	C	D	E
4	47,600	66,400	83,200	87,300
6	70,100	97,800	123,600	131,200
8	92,200	128,900	164,200	174,700
10	115,300	158,900	203,600	218,600
12	136,500	192,400	246,200	272,900

Urbanized

Lanes	B	C	D	E
4	45,900	62,700	75,600	85,400
6	68,900	93,900	113,600	128,100
8	91,900	125,200	151,300	170,900
10	115,000	156,800	189,300	213,600

Freeway Adjustments

Auxiliary Lanes Present in Both Directions	Ramp Metering
+ 20,000	+ 5%

UNINTERRUPTED FLOW HIGHWAYS

Lanes	Median	B	C	D	E
2	Undivided	11,700	18,000	24,200	32,600
4	Divided	36,300	52,600	66,200	75,300
6	Divided	54,600	78,800	99,400	113,100

Uninterrupted Flow Highway Adjustments

Lanes	Median	Exclusive left lanes	Adjustment factors
2	Divided	Yes	+5%
Multi	Undivided	Yes	-5%
Multi	Undivided	No	-25%

[1]Values shown are presented as two-way annual average daily volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.

[2] Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.

[3] Buses per hour shown are only for the peak hour in the single direction of the higher traffic flow.

* Cannot be achieved using table input value defaults.

** Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.

FLORIDA'S
STREETS

FDOT Context Classification

FDOT will routinely plan, design, construct, reconstruct and operate a context-sensitive system of Complete Streets. To this end, a context classification system comprising eight context classifications has been adopted. The context classification of a roadway, together with its transportation characteristics, will provide information about who the users are along the roadway, the regional and local travel demand of the roadway, and the challenges and opportunities of each roadway user (see Figure 1). The context classification and transportation characteristics of a roadway will determine key design criteria for all non-limited-access state roadways.

This document describes the measures to be used to determine the context classification of a roadway.

FIGURE 1 CONTEXT CLASSIFICATION AND TRANSPORTATION CHARACTERISTICS

CONTEXT CLASSIFICATION

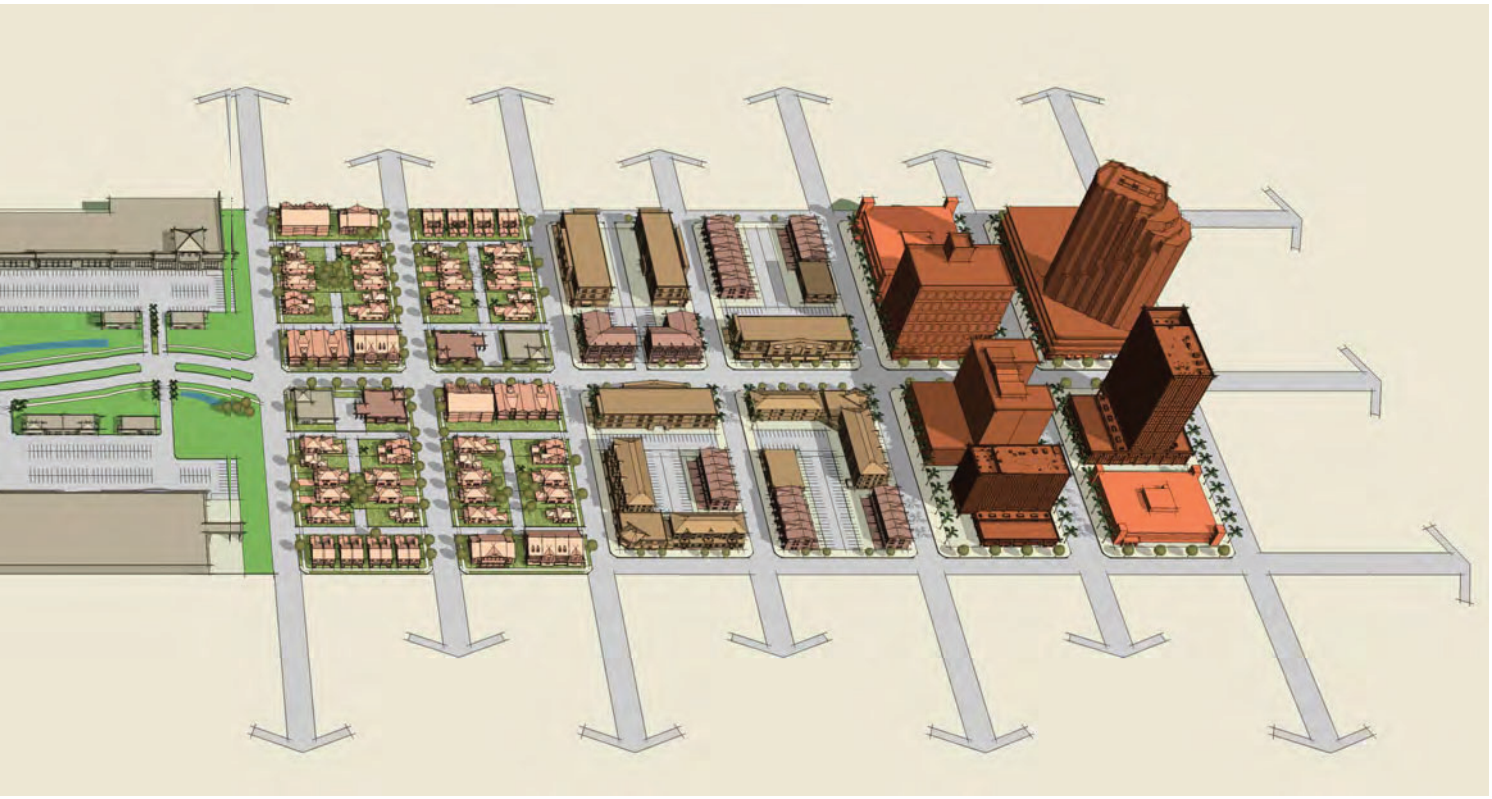
The context classification system broadly identifies the various built environments existing in Florida, as illustrated in Figure 2. State roadways will extend through a variety of context classifications. Figure 2 should not be taken literally to imply all roadways will have every context classification or that context classifications occur in the sequence shown. FDOT's context classification system describes the general characteristics of the land use, development patterns, and roadway connectivity along a roadway, providing cues as to the types of uses and user groups that will likely utilize the roadway. The context classification of a roadway will inform FDOT's planning, PD&E, design, construction, and maintenance approaches to ensure that state roadways are supportive of safe and comfortable travel for their anticipated users. Identifying the context classification is a step in planning and design, as different context classifications will have different design criteria and standards.

The use of context classifications to determine criteria for roadway design elements is consistent with national best practices and direction, including the National Cooperative Highway Research Program

FIGURE 2 FDOT CONTEXT CLASSIFICATIONS

C1-Natural
Lands preserved in a natural or wilderness condition, including lands unsuitable for settlement due to natural conditions.

C2-Rural
Sparsely settled lands; may include agricultural land, grassland, woodland, and wetlands.



C2T-Rural Town
Small concentrations of developed areas immediately surrounded by rural and natural areas; includes many historic towns.

C3R-Suburban Residential
Mostly residential uses within large blocks and a disconnected or sparse roadway network.

(NCHRP) that informs Federal Highway Administration (FHWA) and American Association of State Highway Transportation Officials (AASHTO) guidance. ***NCHRP Report 855: An Expanded Functional Classification System for Highways and Streets*** proposes a similar context-based approach to design that incorporates context, user needs, and transportation functions into the design process. This research was born out of a need to better define contexts beyond urban and rural classifications, and to incorporate multimodal needs into the existing functional classification system.

This document outlines the steps to determine a roadway's context classification. Measures used to determine the context classification are presented, and a process to define the context classification is outlined for:

- All projects on existing roadways and for projects that propose new roadways and are in the PD&E or design phases
- Projects evaluating new roadways in the planning and ETDM screening phases

C3C-Suburban Commercial
Mostly non-residential uses with large building footprints and large parking lots within large blocks and a disconnected or sparse roadway network.

C4-Urban General
Mix of uses set within small blocks with a well-connected roadway network. May extend long distances. The roadway network usually connects to residential neighborhoods immediately along the corridor or behind the uses fronting the roadway.

C5-Urban Center
Mix of uses set within small blocks with a well-connected roadway network. Typically concentrated around a few blocks and identified as part of a civic or economic center of a community, town, or city.

C6-Urban Core
Areas with the highest densities and building heights, and within FDOT classified Large Urbanized Areas (population >1,000,000). Many are regional centers and destinations. Buildings have mixed uses, are built up to the roadway, and are within a well-connected roadway network.

CONTEXT CLASSIFICATION MATRIX

Table 1 Context Classification Matrix presents a framework to determine the context classifications along state roadways. This Context Classification Matrix outlines (1) distinguishing characteristics, (2) primary measures, and (3) secondary measures.

The distinguishing characteristics give a broad description of the land use types and street patterns found within each context classification. The primary and secondary measures provide more detailed assessments of the existing or future conditions along the roadway. These measures can be evaluated through a combination of a field visit, internet-based

TABLE 1 CONTEXT CLASSIFICATION MATRIX

		(2) Primary Measures		
		Land Use	Building Height	Building Placement
Context Classification	**(1) Distinguishing Characteristics**	Description	Floor Levels	Description
C1-Natural	Lands preserved in a natural or wilderness condition, including lands unsuitable for settlement due to natural conditions.	Conservation Land, Open Space, or Park	N/A	N/A
C2-Rural	Sparsely settled lands; may include agricultural land, grassland, woodland, and wetlands.	Agricultural or Single-Family Residential	1 to 2	Detached buildings with no consistent pattern of setbacks
C2T-Rural Town	Small concentrations of developed areas immediately surrounded by rural and natural areas; includes many historic towns.	Retail, Office, Single-Family or Multi-Family Residential, Institutional, or Industrial	1 to 2	Both detached and attached buildings with no or shallow (<20') front setbacks
C3R-Suburban Residential	Mostly residential uses within large blocks and a disconnected or sparse roadway network.	Single-Family or Multi-Family Residential	1 to 2, with some 3	Detached buildings with medium (20' to 75') front setbacks
C3C-Suburban Commercial	Mostly non-residential uses with large building footprints and large parking lots within large blocks and a disconnected or sparse roadway network.	Retail, Office, Multi-Family Residential, Institutional, or Industrial	1 (retail uses) and 1 to 4 (office uses)	Detached buildings with large (>75') setbacks on all sides
C4-Urban General	Mix of uses set within small blocks with a well-connected roadway network. May extend long distances. The roadway network usually connects to residential neighborhoods immediately along the corridor or behind the uses fronting the roadway.	Single-Family or Multi-Family Residential, Institutional, Neighborhood Scale Retail, or Office	1 to 3, with some taller buildings	Both detached and attached buildings with no setbacks or up to medium (<75') front setbacks
C5-Urban Center	Mix of uses set within small blocks with a well-connected roadway network. Typically concentrated around a few blocks and identified as part of a civic or economic center of a community, town, or city.	Retail, Office, Single-Family or Multi-Family Residential, Institutional, or Light Industrial	1 to 5, with some taller buildings	Both detached and attached buildings with no or shallow (<20') front setbacks
C6-Urban Core	Areas with the highest densities and building heights, and within FDOT classified Large Urbanized Areas (population >1,000,000). Many are regional centers and destinations. Buildings have mixed uses, are built up to the roadway, and are within a well-connected roadway network.	Retail, Office, Institutional, or Multi-Family Residential	>4, with some shorter buildings	Mostly attached buildings with no or minimal (<10') front setbacks

More information on measures with undefined thresholds (N/As) are included in Appendix B. The thresholds presented in Table 1 are based on the following sources, with modifications made based on Florida case studies:

1) *2008 Smart Transportation Guidebook: Planning and Designing Highways and Streets that Support Sustainable and Livable Communities*, New Jersey Department of Transportation and Pennsylvania Department of Transportation;

aerial and street view imagery, map analysis, and review of existing or future land use or existing zoning information. The Context Classification Matrix presents the primary and secondary measures thresholds for the eight context classifications.

Appendix A illustrates the eight FDOT context classifications through case studies. These case studies present examples of real-world values for the primary and secondary measures that determine a roadway's context classification.

					(3) Secondary Measures			
		Roadway Connectivity						
Fronting Uses	Location of Off-street Parking	Intersection Density	Block Perimeters	Block Length	Allowed Residential Density	Allowed Office/ Retail Density	Population Density	Employment Density

201.4 Design Speed

Design speed is a principal design control that regulates the selection of many of the project standards and criteria used for design. The selection of an appropriate design speed must consider many factors. The AASHTO publication, ***A Policy on Geometric Design of Highways and Streets***, has a thorough discussion on design speed.

There are three categories of design speed:

High Speed: Design Speeds 50 mph and greater.

Low Speed: Design Speeds of 45 mph and less.

Very Low Speed: Design Speeds 35 mph and less.

201.4.1 Design Speed Selection

Design speed should be selected early in the design process. Select a context-appropriate design speed to attain a desired degree of safety, mobility, and efficiency. Select design speeds in increments of 5 mph.

The District Design Engineer (DDE) and the District Traffic Operations Engineer (DTOE) jointly approve the selected design and posted speeds. This approval is a declaration that the posted speed will not exceed the selected design speed. This is to be documented on the Typical Section Package as described in ***FDM 120.2.3***.

Table 201.4.1 provides an allowable range of mainline design speeds on the State Highway System. ***Table 201.4.2*** provides the minimum design speeds allowed on ramps.

Modification for Non-Conventional Projects:
See RFP for design speed.

Table 201.4.1 Design Speed

Limited Access Facilities (Interstates, Freeways, and Expressways)		
Area	**Allowable Range (mph)**	**SIS Minimum (mph)**
Rural and Urban	70	70
Urbanized	50-70	60
Arterials and Collectors		
Context Classification	**Allowable Range (mph)**	**SIS Minimum (mph)**
C1 Natural	55-70	65
C2 Rural	55-70	65
C2T Rural Town	25-45	40
C3 Suburban	35-55	50
C4 Urban General	30-45	45
C5 Urban Center	25-35	35
C6 Urban Core	25-30	30

Notes:

(1) SIS Minimum Design Speed may be reduced to 35 mph for C2T Context Classification when appropriate design elements are included to support the 35 mph speed, such as on-street parking.

(2) SIS Minimum Design Speed may be reduced to 45 mph for curbed roadways within C3 Context Classification.

(3) For SIS facilities on the State Highway System, a selected design speed less than the SIS Minimum Design Speed requires a Design Variation as outlined in ***SIS Procedure (Topic No. 525-030-260)***.

(4) For SIS facilities not on the State Highway System, a selected design speed less than the SIS Minimum Design Speed may be approved by the District Design Engineer following a review by the District Planning (Intermodal Systems Development) Manager.

15. Supplementary Notes

This product combines work under contract DTFH61-11-D-00030 Task 5008 (Flexibility in Pedestrian and Bicycle Facility Design) and Task 5009 (Multimodal Conflict Points).

16. Abstract

Multimodal transportation networks provide access to jobs, education, health care, recreation, transit, and other essential services in urban, suburban, and rural areas throughout the United States. Interconnected pedestrian and bicycle infrastructure makes walking and bicycling a viable transportation choice for everyone and this contributes to the health, equity, and quality of life of our communities.

This publication is a resource for practitioners seeking to build multimodal transportation networks. The publication highlights ways that planners and designers can apply the design flexibility found in current national design guidance to address common roadway design challenges and barriers. It focuses on reducing multimodal conflicts and achieving connected networks so that walking and bicycling are safe, comfortable, and attractive options for people of all ages and abilities.

This resource includes 24 design topics, organized into two themes. The 12 design topics in Part 1 focus on design flexibility. The 12 topics in Part 2 focus on measures to reduce conflicts between modes. Each design topic is four pages in length and includes relevant case studies and references to appropriate design guidelines.

This document covers a wide range of solutions to achieve multimodal transportation networks. It includes solutions for streets and intersections, and has information about shared use paths and other trails that can serve both transportation and recreation purposes. It includes information about crossing main streets, bridges and underpasses, and about interactions with freight and transit. This resource addresses common concerns and perceived barriers among planning and design professionals and provides specific information about flexible design treatments and approaches.

TRAFFIC CALMING AND DESIGN SPEED

Traffic calming is the combination of measures that reduce some of the negative effects of motor vehicle use, alter driver behavior, and improve conditions for vulnerable road users. Traffic calming uses physical measures to slow motor vehicle speeds and encourages desired behaviors to maximize safety, such as yielding to pedestrians and bicyclists. Typical traffic calming measures include cross-section measures, such as street trees, narrower lanes, and on-street parking. They also include periodic measures, such as curb extensions, speed tables, and chicanes. Traffic calming is an important tool to help improve walking and bicycling conditions.

Design speed is a fundamental factor in roadway design and is used to establish design features. It affects horizontal alignment, vertical alignment, and cross section features. Higher design speeds can result in streets that are less comfortable for vulnerable users. As speeds increase, crash severity and fatality rates increase significantly for all users: pedestrians, bicyclists, and people in motor vehicles. Designers have the flexibility to set design speeds lower than the posted speed limit.

KEY DESIGN FLEXIBILITY

The **2011 AASHTO Green Book** provides flexibility when it comes to selecting appropriate design speeds given the context of a particular roadway:

"Design speed should be a logical one with respect to the anticipated operating speed, topography, the adjacent land use, and the functional classification of the highway. In selection of design speed every effort should be made to attain a desired combination of safety, mobility, and efficiency within the constraints of environmental quality, economics, aesthetics, and social or political impacts"

AASHTO Green Book 2011, p. 2-54

OTHER RESOURCES

"In urban areas, the design of the street should generally be such that it limits the maximum speed at which drivers can operate comfortably, as needed to balance the needs of all users."

FHWA, "Relationship between Design Speed and Posted Speed," memorandum, October 7, 2015

"The severity of pedestrian crashes, a significant concern in urban areas, is greatly increased as speeds increase. Context-sensitive solutions for the urban environment often involve creating a safe roadway environment in which the driver is encouraged by the roadway's features and the surrounding areas to operate at low speeds."

AASHTO Flexibility Guide 2004, p. 19

"There is a direct correlation between higher speeds, crash risk, and the severity of injuries... Design streets using target speed, the speed you intend for drivers to go, rather than operating speed. The 85th percentile of observed target speeds should fall between 10–30 mph on most urban streets."

NACTO Urban Street Design Guide 2014, pp. 140–141

"Traffic calming challenges the traditional design view of a roadway design, namely, that higher speeds are desirable and indicative of a high-quality design."

AASHTO Flexibility Guide 2004, p. 88

TRAFFIC CALMING AND DESIGN SPEED MYTHS

This design topic addresses myths related to traffic calming and setting appropriate design speeds for new roadways and retrofit projects.

MYTH 1: ROUTE MODIFICATIONS ARE A FORM OF TRAFFIC CALMING

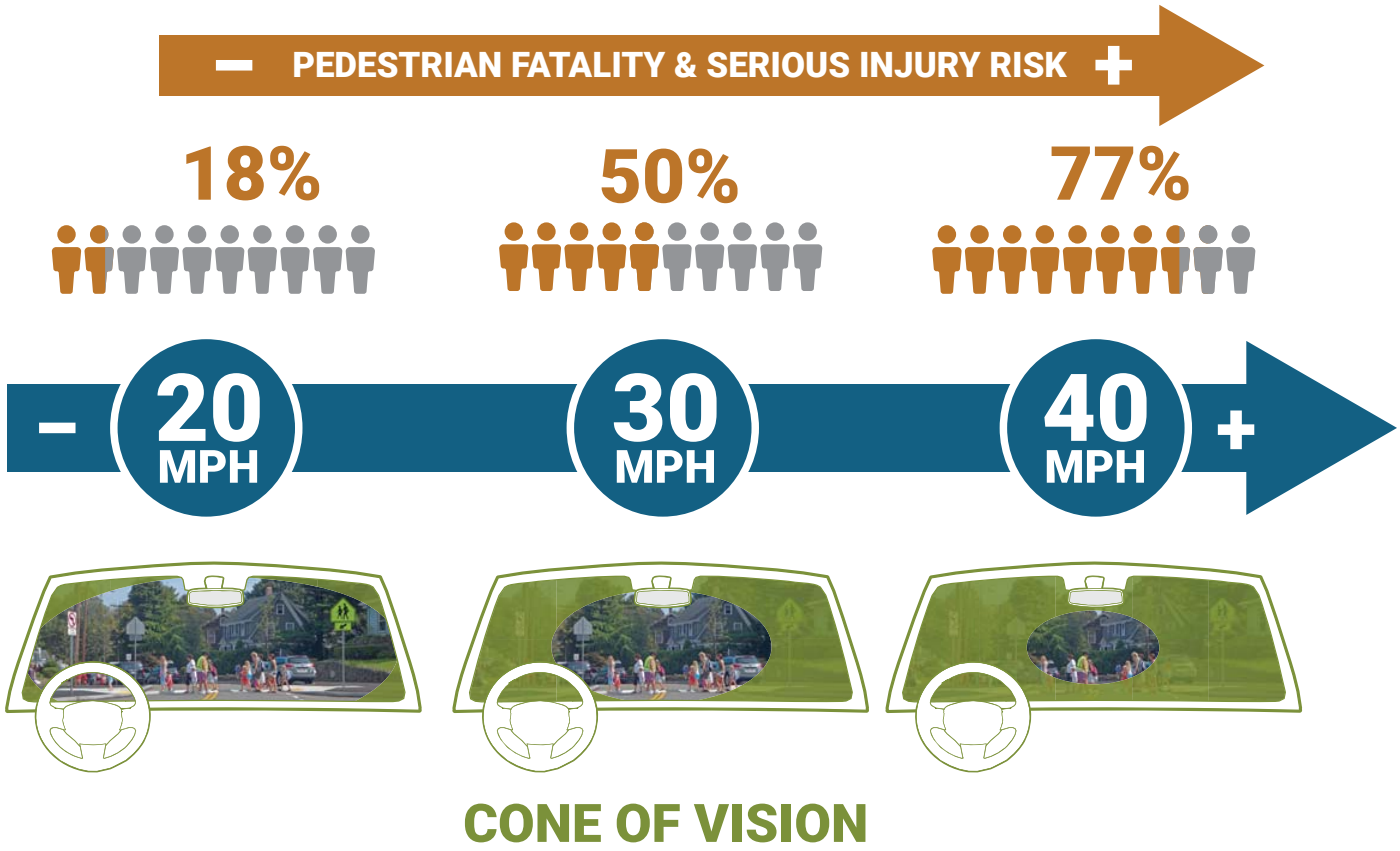
Traffic calming is about reducing speeds, not about removing pieces of the street network or changing the route people take from Point A to Point B. These techniques are called "route modifications." Route modifications remove access through signing and minor geometric changes (i.e., one-way restrictions, street closures, partial closures, turn prohibitions, and diverters). In general, they should be used with caution, because they can have the impact of increasing traffic volumes on other streets that also serve pedestrians and bicyclists. However, route modification can be used to compliment traffic calming efforts on certain project types, such as neighborhood greenways or bike boulevards. In some cases, traffic calming projects may result in reduced traffic volumes and motorists may divert to other routes. This outcome should be factored into a network approach to traffic calming.

MYTH 2: STOP SIGNS ARE TRAFFIC CALMING MEASURES

Sometimes residents request STOP signs to deter drivers from speeding in their neighborhoods. However, STOP signs must meet certain criteria in order to maintain effectiveness. STOP signs installed for the purpose of slowing motorists can be counterproductive: motorists may accelerate rapidly after a stop and maintain higher speeds between signs. This behavior is called "speed spiking." Additionally, motorists may roll through STOP signs, endangering pedestrians who are expecting vehicles to come to a complete stop.

MYTH 3: DESIGN SPEED SHOULD BE GREATER THAN POSTED SPEED

Some designers use a design speed that is higher than the posted speed with the goal of improving safety. However, higher design speeds can result in more generous vehicular designs that cause motorists to drive faster, which reduces safety. Best practices from ITE and NACTO recommend setting a design speed equal to the target speed. As defined in the **ITE Designing Walkable Urban Thoroughfares**, "Target speed is the highest speed at which vehicles should operate on a roadway consistent with the level of multimodal activity and adjacent land uses to provide both mobility for motor vehicles and a safe environment for pedestrians, bicyclists, and public transit users" **(2010, p. 108)**. Designers should consider several factors in addition to the posted speed to determine an appropriate design speed including, but not limited to, target operating speed, type and density of adjacent land uses, level of pedestrian, bicycle, and transit activity, and frequency of driveways.



MYTH 4: POSTED SPEED LIMITS MUST USE THE 85TH PERCENTILE METHODOLOGY

The **FHWA Methods and Practices for Setting Speed Limits** summarizes several engineering approaches to setting speed limits. The "Engineering approach" and "Expert system approach" are the most commonly used. The Engineering approach primarily uses the 85th percentile speed **(2012, p. 10)**. However, from a safety perspective this approach can result in excessive speeds. For the Expert system approach, FHWA developed a model called USLIMITS2, which determines an appropriate speed limit for all roadway users. For roadway segments that experience high pedestrian and bicyclist activities, USLIMITS2 recommends speed limits close to 50th percentile instead of 85th percentile speed.

A third approach set forward in **Methods and Practices for Setting Speed Limits** called the "Injury minimization" or "safe system approach." This approach is often more appropriate in locations with pedestrian and bicycle activity. In this approach, "speed limits are set according to the crash types that are likely to occur, the impact forces that result, and the human body's tolerance to withstand these forces" **(2012, p. 10)**. This approach is consistent with Vision Zero principles—which state that no loss of life on a road system is acceptable. The "injury minimization" approach is therefore highly appropriate in contexts where people commonly walk or bike. After traffic calming measures have been implemented, a speed study should be conducted to determine if the speed limit can be reduced.

MYTH 5: CLEAR ZONES SHOULD BE APPLIED EQUALLY ON ALL STREETS

Clear zones are a "forgiving" roadside design concept intended to decrease the frequency and severity of fixed-object crashes by providing a space for errant vehicles to recover after leaving the roadway. While clear zones are appropriate for freeways and high speed roadways, the **AASHTO Roadside Design Guide** recognizes that there are practical limitations to clear zones on low-speed curbed streets. In urban, suburban, and small town rural settings where pedestrian and bicycle activity is expected and the traffic speed is lower and depending on the context, roadway design may incorporate street trees, furnishings, and plantings to create a sense of enclosure. This provides a traffic calming effect, which may increase comfort and safety for vulnerable road users.

As motor vehicle speeds increase, the risk of serious injury or fatality for a pedestrian also increases ***(AARP Impact Speed and a Pedestrian's Risk of Severe Injury or Death 2011, p. 1)****. Also, motorist visual field and peripheral vision is reduced at higher speeds.*

MYTH 6: RAISED INTERSECTIONS AND RAISED CROSSWALKS ARE NOT APPROPRIATE ON ARTERIAL STREETS

Raised measures require motor vehicles to reduce speeds and can be appropriate on arterial roadways, particularly at intersections with slip lanes and on intersecting side streets. As stated in the **AASHTO Flexibility Guide**, "traffic calming techniques may apply on arterials, collectors, or local streets" **(2004, p. 87)**. Raised measures may not be appropriate on higher speed roads. If raised measures are desired to improve pedestrian or bicyclist safety, designers should consider completing a study and reducing the speed limit to 35 mi/h or lower. Raised measures can minimize impacts to emergency vehicle response times through strategic placement and design details such as longer ramps, slots, or tire grooves. Gradual transitions on raised measures benefit passenger comfort and pavement conditions. These slots or grooves can be placed at locations that correspond to emergency vehicle wheelbases.

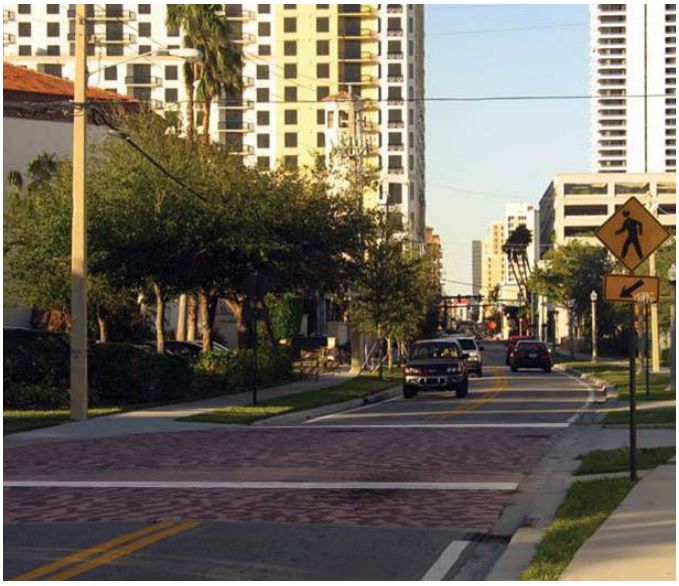
MYTH 7: LOWER SPEEDS ALWAYS INCREASE TRAVEL TIMES

Roadways designed for lower motor vehicle speeds may not result in longer travel times compared to similar streets with higher motor vehicle speeds. Travel times depend on a wide variety of factors, such as intersection frequency, operational efficiency, and driver characteristics. Delay for motorists in suburban and urban areas is often due to congestion at signalized intersections, and usually not travel speeds between intersections. There are several techniques to lower motor vehicle speeds that improve safety for all roadway users while simultaneously reducing congestion. Replacing signalized intersections with modern roundabouts, a Proven Safety Countermeasure, or coordinating signals for speeds of 15 to 25 mi/h **(AASHTO Green Book 2011, pg. 2-57)** can maintain or reduce vehicular travel times on a corridor.

ADDITIONAL RESOURCES

There are several comprehensive guides to traffic calming that provide additional information such as **Traffic Calming: State of the Practice (1999)** by FHWA and ITE, the **Traffic Calming Website (http://www.ite.org/traffic/)** by ITE, and **LA Living Streets Manual: Chapter 10 Traffic Calming (2012)** by the City of Los Angeles.

CASE STUDIES



SOUTH GOLDEN ROAD
GOLDEN, CO

The City of Golden installed a series of four roundabouts resulting in improvements to traffic operations and economic development. Initially, South Golden Road served 12,000 vehicles per day via four travel lanes and one center turn lane. The wide roadway, inconsistent sidewalks, and numerous driveways contributed to speeding and reduced access to side streets. In 1999, four roundabouts and raised medians were constructed. After installation, the 85th percentile travel speed decreased from 47 mi/h to 35 mi/h, and travel time decreased from an average of 103 to 78 seconds. The crash rate dropped 67 percent and traffic-related injuries dropped over 80 percent. The more pedestrian-oriented environment contributed to economic activity, and sales tax revenue increased 68 percent.

OLIVE AVENUE
WEST PALM BEACH, FL

In 1999, the City of West Palm Beach completed a traffic calming project on Olive Avenue, a State arterial roadway. The road had been one-way with approximately 12,000 vehicles per day and relatively high speeds. Beach Atlantic College, which occupies both sides of Olive Avenue, was considering building two pedestrian bridges to connect their severed campus. The City of West Palm Beach, the Florida Department of Transportation, and the College collaborated to improve the design. The new design narrowed travel lanes, added landscaping and street trees, and converted the arterial from one-way to two-way. The project incorporated raised crossings, designed with transitions suitable for emergency vehicles. The result provided comfortable at-grade crossings, increased property values, improved quality of life, and reduced traffic volumes.

ARTERIAL SLOW ZONE PROGRAM
NEW YORK CITY, NY

One strategy to create self-enforcing, slower speeds is through signal progression along signalized corridors, supplemented by other traffic calming measures, education, and enforcement. As a part of New York City's Vision Zero initiative, the Arterial Slow Zone Program focuses on reducing speeds along corridors with high crash rates. On the 25 corridors selected as Arterial Slow Zones, signals were retimed for 25 mi/h speed progression. Slow Zone branding signs similar to the City's Neighborhood Slow Zones program were added to the corridor. In addition, police provide focused enforcement along these zones for speeding, failure to obey traffic signals, and failure to yield to pedestrians.

»APPENDIX C: RECOMMENDED PROJECT RANKINGS

RECOMMENDED PROJECTS		Complete Streets Implementation/ Network Completion	Relieves Congestion/ Improves Regional Traffic Operations	Effect on Safety	Addresses Level-of-Stress Issues	Cost/ Cost Effectiveness	Ease of Implementation	Total Score
LOCATION	PROJECT							
10th Avenue North from Davis Road to Sago Park Road; Henthorne Drive from Canal 9 pedestrian bridge to 10th Avenue North	Palm Springs Park Connector Pathway Phase 5	5	1	4	5	4	4	23
Greenbrier Drive from Davis Road to South Congress Avenue (north side)	Bike & Pedestrian Network Extensions - Greenbrier Drive	5	1	4	5	4	4	23
Greenbrier Drive from Davis Road to Donald Road; Donald Road from Greenbrier Drive to Cypress Way (east side); Cypress Way from Donald Road to South Military Trail (north side)	Bike & Pedestrian Network Extensions - Alemeda West	5	1	3	5	4	4	22
Dolan Road from crosswalk to South Congress Avenue (south side)	Bike & Pedestrian Network Extensions - Dolan East	5	1	4	4	2	2	18
Lakewood Road, and Kirk Road (west side)	Bike & Pedestrian Network Extensions - Lakewood West	5	1	3	4	4	3	20
Davis Road: Lakewood Drive to Lake Worth Drive; 2nd Avenue North: Lake Worth Drive to Engle Road; Bellevue Avenue: 2nd Avenue North to Lake Worth Road; Lake Worth Road Bellevue Avenue to crossing to campus	Bike & Pedestrian Network Extensions - 2nd Avenue East	5	1	4	4	2	2	18
Kirk Road (East side)	Bike & Pedestrian Network Extensions - Kirk North	4	1	3	4	5	1	18
Lake Worth Road: South Military Trail to Coconut Road and NE 2nd Avenue	Buffered Bike Lanes and Complete Streets - Lake Worth Road	4	1	4	3	5	1	18
Forest Hill Boulevard: South Military Trail to Prairie Road	Buffered Bike Lanes and Complete Streets - Forest Hill Boulevard	4	1	3	3	5	3	19
South Congress Avenue	Buffered Bike Lanes and Complete Streets - South Congress Avenue	4	1	4	3	3	1	16
Meadow Road from Congress Avenue to Prairie Road and Prairie Road from Meadow Road to Forest Hill Boulevard	Bike & Pedestrian Network Extensions – Meadow Prairie	4	1	3	3	4	2	17
10th Avenue North from South Military Trail to Davis Road	Buffered Bike Lanes and Complete Streets - 10th Avenue North	4	1	3	2	4	3	17
Lake Worth Road Pedestrian Signal	Installation of a pedestrian signal to improve pedestrian crossing spacing along the Lake Worth Road corridor either near Home Depot or Gulfstream Road	5	5	3	5	3	1	22
Davis Road and Lake Worth Road	Convert the existing stop controlled intersection into a signalized intersection.	3	5	4	3	4	2	21
Lakewood Road and Military Trail	Convert the existing stop controlled intersection into a signalized intersection	3	5	4	3	4	3	22
Kirk Road and Park Lane	Conversion from traffic signal to Roundabout if feasible	1	3	4	2	3	2	15
Kirk Road and Lakewood Road	Conversion from traffic signal to Roundabout if feasible	1	3	3	2	2	1	12

RECOMMENDED PROJECTS		Complete Streets Implementation/ Network Completion	Relieves Congestion/ Improves Regional Traffic Operations	Effect on Safety	Addresses Level-of-Stress Issues	Cost/ Cost Effectiveness	Ease of Implementation	Total Score
LOCATION	PROJECT							
Davis Road and 2nd Avenue North	Conversion of all way stop to Roundabout if feasible	1	3	3	2	2	1	12
10th Avenue - Between Kirk Road and Congress Avenue	Installation of speed radar signs pending traffic study approval	1	1	3	2	5	5	17
Congress Avenue - Between Forest Hill Boulevard and Summit Boulevard	Installation of speed radar signs pending traffic study approval	1	1	3	2	5	5	17
Alemeda Drive - Between South Congress and Kirk Road	Evaluate a neighborhood traffic circle at Davis Road and Alemeda Drive; Evaluate speed tables along Alemeda Drive	1	2	2	2	3	3	13
Davis Road - Between Greenbrier Drive and 10th Avenue N	Evaluate a neighborhood traffic circle at Davis Road and Riverdale Road or Winged Foot Road; Evaluate speed tables along Davis Road	1	2	2	2	3	3	13
Lake Worth Road - Between Kirk and South Congress Avenue	Installation of speed radar signs pending traffic study approval	1	1	4	2	5	5	18
Lillian Road - Between Congress Avenue and Lori Drive	Evaluate speed tables along Lilian Road	1	1	4	2	4	3	15
Lorene Drive east of Congress Avenue	Evaluate speed tables along Lorene Drive	1	1	5	2	4	4	17
Park Lane/Greenbrier Drive - Between Kirk Road and Congress Avenue	Evaluate neighborhood traffic circles at the intersections of Davis Road and Gulfstream Road; Evaluate speed tables on Greenbrier Drive	1	2	3	2	2	2	12
Alemeda Drive - Military Trail to Congress Avenue	Perform Corridor Safety Study to mitigate for high crash location	1	2	5	5	4	2	19
Summit Boulevard - Between Congress Avenue to Florida Mango Road	Perform Corridor Safety Study to mitigate for high crash location	1	2	5	4	4	2	18
Kirk Road - 10th Avenue to Lake Worth Road	Perform Corridor Safety Study to mitigate for high crash location	1	1	5	4	4	2	17
Kirk Road - Summit Boulevard to Forest Hill Boulevard	Perform Corridor Safety Study to mitigate for high crash location	1	1	5	4	4	2	17
Kirk Road - Forest Hill Boulevard to Greenbrier Drive	Perform Corridor Safety Study to mitigate for high crash location	1	1	5	4	4	2	17
Congress Avenue - 10th Avenue to Lake Worth Road	Perform Corridor Safety Study to mitigate for high crash location; high pedestrian and bicycle crash location	1	2	5	5	4	3	20
Citywide	Adopt Vision Zero Policy	3	2	5	5	4	4	23

»APPENDIX D: FDOT AND PALM BEACH COUNTY ROADWAY FACILITIES AND INTERSECTIONS

FDOT and Palm Beach County Roadway Facilities and Intersections

Traffic Operational Intersection Improvements

The Roadway Assessment included an evaluation of the traffic operations at key intersections in the transportation analysis study area. Although the Roadway Assessment included a study area with potential annexation areas outside the Village of Palm Springs municipal boundaries, the improvements presented in the following Table include intersections that are not Village roadways and include FDOT and/or Palm Beach County roadways that are within the Village limits and outside the Village limits but within the project study area. The following Table depicts the potential traffic operational intersection improvement projects that are on at these intersections that are not under the maintenance by the Village of Palm Springs.

Traffic Operational Improvements- Intersections (FDOT/County)

Number	Intersection Name	Scope of Mitigation Improvements
1	Military Trail and Gun Club Road	Addition of dual eastbound and westbound left turn lanes; addition of eastbound right turn lane; addition of northbound right turn lane; traffic signal timing optimization
2	Kirk Road and Gun Club Road	Addition of eastbound right turn lane; traffic signal timing optimization
3	Congress Avenue and Summit Blvd	Addition of eastbound and westbound dual left turn lanes; traffic signal optimization
4	Congress Avenue and Forest Hill Blvd	Addition of northbound, eastbound and westbound right turn lanes; traffic signal timing optimization
5	Military Trail and Lake Worth Road	Addition of a southbound and eastbound righ turn lane; traffic signal optimization
6	Congress Avenue and Lake Worth Road	Addition of a dual southbound left turn lane; traffic signal optimization
7	Congress Avenue and Melaleuca Lane	Addition of eastbound and westbound through lanes; addition of a southbound through lane; traffic signal timing optimization
8	Military Trail and Summit Blvd	Addition of dual northbound and southbound left turn lanes; traffic signal timing optimization
9	Military Trail and Forest Hill Blvd	Addition of northbound /southbound dual left turn lanes; addition of a northbound and southbound right turn lanes; traffic signal optimization
10	Kirk Road and Forest Hill Blvd	Addition of dual eastbound/westbound left turn lanes; addition of eastbound/westbound right turn lanes; traffic signal timing
11	Military Trail and 10th Avenue	Addition of northbound, eastbound and westbound right turn lanes; traffic signal timing optimization
12	Congress Avenue and 10th Avenue	Addition of northbound right turn lane; traffic signal timing optimization
13	Florida Mango Road and 10th Avenue	Addition of dual eastbound and westbound left turn lanes; traffic signal timing optimization
14	Kirk Road and Melaleuca Lane	Addition of eastbound right turn lane; traffic signal timing optimization

Traffic Operational Road Segment Improvements

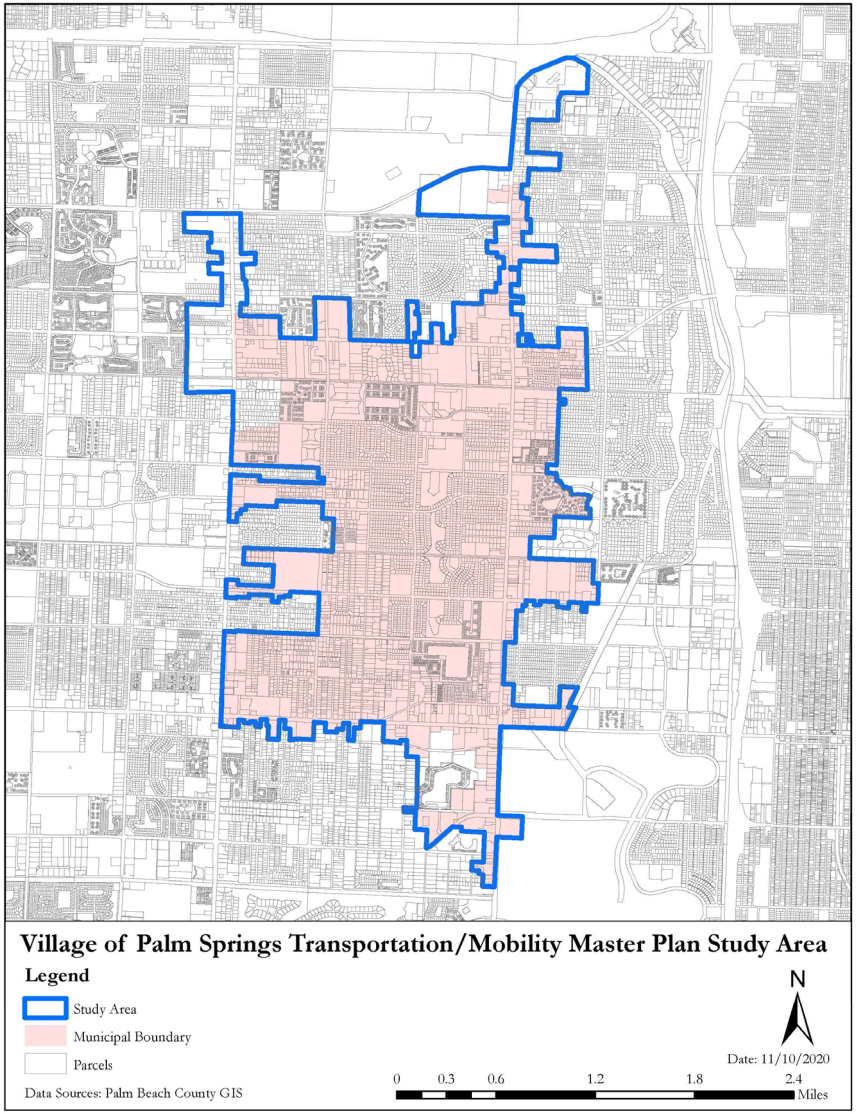
The Roadway Assessment included an evaluation of the traffic operations at key road segments in the transportation analysis study area. The following Table depicts the potential traffic operational road segment improvement projects that are along FDOT or Palm Beach County roadway facilities that are not under the maintenance of the Village of Palm Springs. These potential road segment improvements have not been included in the Transportation/Mobility Master Plan.

Traffic Operational Improvements- Road Segments (FDOT/County)			
Number	**Road Segment Name**	**Year**	**Scope of Mitigation Improvements**
1	Military Trail- Southern Boulevard to Forest Hill Boulevard	2030	Widen from 6 to 8 lane divided roadway if feasible
2	Congress Avenue- 10th Avenue to Lake Worth Road	2030	Widen from 6 to 8 lane divided roadway if feasible
3	Forest Hill Boulevard- Kirk Road to Congress Avenue	2030	Widen from 6 to 8 lane divided roadway if feasible
4	Forest Hill Boulevard- Congress Avenue to I-95	2020	Widen from 6 to 8 lane divided roadway if feasible
5	10th Avenue- Kirk Road to Congress Avenue	2020	Widen from 4 to 6 lane divided roadway if feasible
6	Melaleuca Lane- Congress Avenue to I-95	2020	Widen from 4 to 6 lane divided roadway if feasible

Village of Palm Springs Transportation/Mobility Master Plan

- Presentation to Village Council

September 23, 2021



Agenda

- Brief Project Review
- Summary of Findings
- Project Prioritization List
- Discussion

Brief Review: Study Area

- Village of Palm Springs
- Additional areas within the Village's Future Annexation Area

Brief Review: Study Objectives

- Review current traffic issues, including vehicular travel, and roadway configurations and develop recommendations for improvement while taking into consideration future planned development opportunities.
- Review bicycle and pedestrian facilities and develop policy and project recommendations to improve accessibility to businesses, residential, public/civic facilities, and effect first and last mile connections to Palm Tran.
- Establish basis for local transit needs.
- Establish an overall mobility plan for the Village with projects developed by category:
  - Roadway
  - Bicycle
  - Pedestrian
  - Transit
  - Policy

Vehicular Traffic

Summary of results

- 6 roadways segments will fail to meet adopted Level of Service in the future (2030)
- 17 of 34 Intersections will fail to meet acceptable levels of service by 2030
- Evaluated 9 locations for speeding concerns – 8 locations have speeding issues
- Evaluation of crash locations

Pedestrian and Bicycle Facilities

Summary

- Pedestrian facilities have widespread gaps
- Bicycle facilities are few, and much more is required to build a network
- Grid has a lack of continuous N-S parallel paths that challenge the network
- Facilities development to emphasize complete streets and Vision Zero objectives
- Park Connector network serves as in initial “grid” for implementation.
- Subsequent pathways expand from this core network
- Bicycle routes are parallel to arterials and focused on collector and local roads.
- Transit stop locations are accounted for to facilitate the “first-and-last-mile” to support existing transit service

Transit Recommendations

- Focus on existing Palm Tran Routes and “first-last mile” connectivity (Pedestrian and Bicycle projects)
- Local circulator – wait until there is stronger demand

Prioritization Criteria

- Complete Streets Implementation/Network Completion
  - Prioritize 1st and last mile connections to transit
  - Prioritize infill of gaps
- Relieves Congestion/Improves Traffic Operations
- Effect on Safety
- Addresses Level of Stress issues
- Cost/Cost Effectiveness
- Ease of Implementation

- Each project was rated on a scale of 1-5 for each criteria
- Total Scores provide for project ranking

Prioritized Projects List

Project Ranking	Location	Project Type	Project	Total Score
1	10th Avenue North from Davis Road to Sago Park Road; Henthorne Drive from Canal 9 pedestrian bridge to 10th Avenue North	Bicycle/Pedestrian	Palm Springs Park Connector Pathway Phase 5	23
2	Greenbrier Drive from Davis Road to South Congress Avenue (north side)	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – Greenbrier Drive	23
3	Citywide	Policy	Adopt Vision Zero Policy	23
4	Greenbrier Drive from Davis Road to Donald Road; Donald Road from Greenbrier Drive to Cypress Way (east side); Cypress Way from Donald Road to South Military Trail (north side)	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – Alemeda West	22
5	Lake Worth Road Pedestrian Signal	Pedestrian	Installation of a pedestrian signal to improve pedestrian crossing spacing along the Lake Worth Road corridor either near Home Depot or Gulfstream Road	22
6	Lakewood Road and Military Trail	Roadway/Intersection	Convert the existing stop controlled intersection into a signalized intersection	22
7	Davis Road and Lake Worth Road	Roadway/Intersection	Convert the existing stop controlled intersection into a signalized intersection.	21
8	Lakewood Road, and Kirk Road (west side)	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – Lakewood West	20
9	Congress Avenue- 10th Avenue to Lake Worth Road	Roadway/Intersection	Perform Corridor Safety Study to mitigate for high crash location; high pedestrian and bicycle crash location	20
10	Forest Hill Boulevard: South Military Trail to Prairie Road	Bicycle/Pedestrian	Buffered Bike Lanes and Complete Streets - Forest Hill Boulevard	19

Prioritized Projects List

Project Ranking	Location	Project Type	Project	Total Score
11	Alemeda Drive- Military Trail to Congress Avenue	Roadway/Intersection	Perform Corridor Safety Study to mitigate for high crash location	19
12	Dolan Road from crosswalk to South Congress Avenue (south side)	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – Dolan East	18
13	Davis Road: Lakewood Drive to Lake Worth Drive; 2nd Avenue North: Lake Worth Drive to Engle Road; Bellevue Avenue: 2nd Avenue North to Lake Worth Road; Lake Worth Road Bellevue Avenue to crossing to campus	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – 2nd Avenue East	18
14	Kirk Road (East side)	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – Kirk North	18
15	Lake Worth Road: South Military Trail to Coconut Road and NE 2nd Avenue	Bicycle/Pedestrian	Buffered Bike Lanes and Complete Streets - Lake Worth Road	18
16	Lake Worth Road- Between Kirk and South Congress Avenue	Roadway/Intersection	Installation of speed radar signs pending traffic study approval	18
17	Summit Boulevard- Between Congress Avenue to Florida Mango Road	Roadway/Intersection	Perform Corridor Safety Study to mitigate for high crash location	18
18	Meadow Road from Congress Avenue to Prairie Road and Prairie Road from Meadow Road to Forest Hill Boulevard	Bicycle/Pedestrian	Bike & Pedestrian Network Extensions – Meadow Prairie	17
19	10th Avenue North from South Military Trail to Davis Road	Bicycle/Pedestrian	Buffered Bike Lanes and Complete Streets - 10th Avenue North	17
20	10th Avenue- Between Kirk Road and Congress Avenue	Roadway/Intersection	Installation of speed radar signs pending traffic study approval	17

Prioritized Projects List

Project Ranking	Location	Project Type	Project	Total Score
21	Congress Avenue- Between Forest Hill Boulevard and Summit Boulevard	Roadway/Intersection	Installation of speed radar signs pending traffic study approval	17
22	Lorene Drive east of Congress Avenue	Roadway/Intersection	Evaluate speed tables along Lorene Drive	17
23	Kirk Road- 10th Avenue to Lake Worth Road	Roadway/Intersection	Perform Corridor Safety Study to mitigate for high crash location	17
24	Kirk Road- Summit Boulevard to Forest Hill Boulevard	Roadway/Intersection	Perform Corridor Safety Study to mitigate for high crash location	17
25	Kirk Road- Forest Hill Boulevard to Greenbrier Drive	Roadway/Intersection	Perform Corridor Safety Study to mitigate for high crash location	17
26	South Congress Avenue	Bicycle/Pedestrian	Buffered Bike Lanes and Complete Streets - South Congress Avenue	16
27	Kirk Road and Park Lane	Roadway/Intersection	Conversion from traffic signal to Roundabout if feasible	15
28	Lillian Road- Between Congress Avenue and Lori Drive	Roadway/Intersection	Evaluate speed tables along Lilian Road	15
29	Alemeda Drive- Between South Congress and Kirk Road	Roadway/Intersection	Evaluate a neighborhood traffic circle at Davis Road and Alemeda Drive; Evaluate speed tables along Alemeda Drive	13
30	Davis Road- Between Greenbrier Drive and 10th Avenue N	Roadway/Intersection	Evaluate a neighborhood traffic circle at Davis Road and Riverdale Road or Winged Foot Road; Evaluate speed tables along Davis Road	13
31	Kirk Road and Lakewood Road	Roadway/Intersection	Conversion from traffic signal to Roundabout if feasible	12
32	Davis Road and 2nd Avenue North	Roadway/Intersection	Conversion of all way stop to Roundabout if feasible	12
33	Park Lane/Greenbrier Drive- Between Kirk Road and Congress Avenue	Roadway/Intersection	Evaluate neighborhood traffic circles at the intersections of Davis Road and Gulfstream Road; Evaluate speed tables on Greenbrier Drive	12

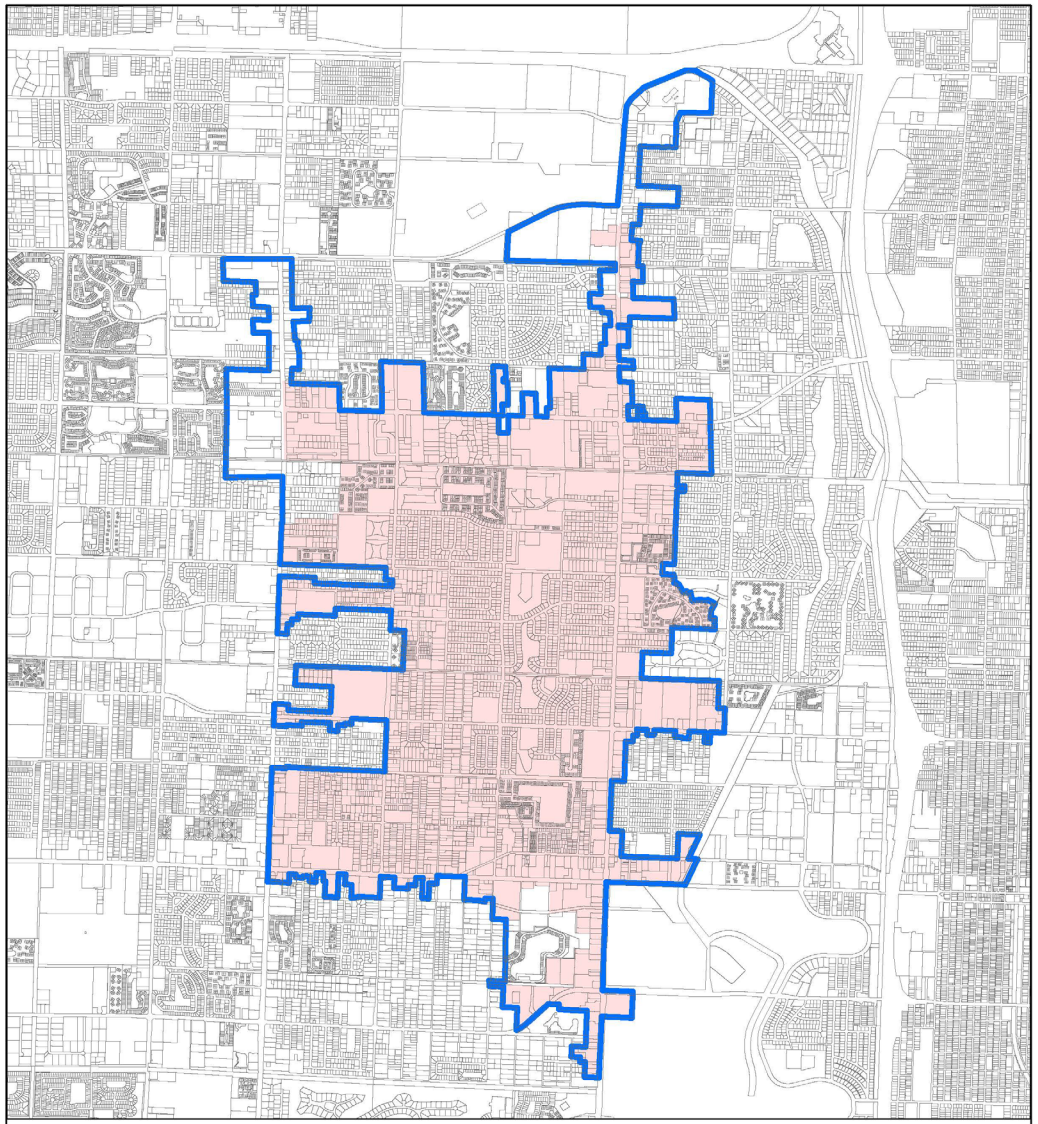
Village of Palm Springs Transportation/Mobility Master Plan

- Presentation to Village Council

May 13, 2021

Agenda

- Introduction
- Scope and Schedule
- Analysis/Potential solutions and policy needs
- Project Prioritization Criteria
- Questions and answer, discussion



Study Objectives

- Review current traffic issues, including vehicular travel, and roadway configurations and develop recommendations for improvement while taking into consideration future planned development opportunities.
- Review bicycle and pedestrian facilities and develop policy and project recommendations to improve accessibility to businesses, residential, public/civic facilities, and effect first and last mile connections to Palm Tran.
- Establish basis for local transit needs.
- Establish an overall mobility plan for the Village with projects developed by category:
  - Roadway
  - Bicycle
  - Pedestrian
  - Transit
  - Policy

Study Area

- Village of Palm Springs
- Additional areas within the Village's Future Annexation Area

Project Tasks and Projected Timeline

Roadway Assessment

- **Traffic Data Collection-** Palm Beach County Traffic Engineering Division and FDOT published recent traffic counts used. Additional intersection turning movement counts and speed/volume tube counts collected.
- **Traffic Operational Analysis** was completed at 31 key intersections for the AM and PM peak hours for 2020 existing and 2030 future conditions.
- **Road Segment Link Analysis** was completed at 22 north-south and 19 east-west roadways for the 2020 existing and 2030 future conditions.
- **Speed Evaluation** was completed for nine roadway corridor segments
- **Safety Review/Evaluation** was completed for the 22 north-south and 19 east-west roadways

Vehicular Traffic

Summary of results

- 6 roadways segments will fail to meet adopted Level of Service in the future (2030)
- 17 of 34 Intersections will fail to meet acceptable levels of service by 2030
- Evaluated 9 locations for speeding concerns – 8 locations have speeding issues
- Evaluation of crash locations

Vehicular Traffic

- Military Trail- Southern Boulevard to Forest Hill Boulevard- LOS E in 2030
- Congress Avenue- 10th Avenue to Lake Worth Road- LOS E in 2030
- Forest Hill Boulevard- Kirk Road to Congress Avenue- LOS E in 2030
- Forest Hill Boulevard- Congress Avenue to I-95- LOS E in 2020 and LOS F in 2030
- 10th Avenue- Kirk Road to Congress Avenue- LOS E in 2020 and LOS F in 2030
- Melaleuca Lane- Congress Avenue to I-95- LOS E in 2020 and LOS F in 2030

Vehicular Traffic (Intersections)

- Military Trail and Gun Club Road- LOS F in 2020 and in 2030 AM;
- Kirk Road and Gun Club Road- LOS E in 2020 and LOS F in 2030 AM; LOS E in 2030 PM
- Military Trail and Summit Boulevard- LOS E in 2030 AM; LOS E in 2020 PM and LOS F in 2030 PM
- Kirk Road and Summit Boulevard- LOS E in 2030 PM;
- Congress Avenue and Summit Boulevard- LOS F in 2020 and in 2030 AM; LOS E in 2020 and LOS F in 2030 PM;
- Military Trail and Forest Hill Boulevard- LOS E in 2020 and in 2030 AM; LOS F in 2020 and in 2030 PM;
- Kirk Road and Forest Hill Boulevard- LOS E in 2020 and in 2030 AM; LOS F in 2020 and in 2030 PM;
- Congress Avenue and Forest Hill Boulevard- LOS F in 2020 and in 2030 AM; LOS F in 2020 and in 2030 PM;
- Florida Mango Road and Forest Hill Boulevard- LOS E in 2020 and in 2030 AM; LOS E in 2020 and in 2030 PM;
- Military Trail and Alemeda Drive- LOS E in 2020 and in 2030 PM;
- Military Trail and 10th Avenue- LOS E in 2020 and in 2030 AM; LOS F in 2020 and in 2030 PM;
- Congress Avenue and 10th Avenue- LOS E in 2030 AM; LOS E in 2020 and LOS F in 2030 PM;
- Florida Mango Road and 10th Avenue- LOS F in 2020 and in 2030 PM;
- Military Trail and Lake Worth Road- LOS F in 2020 and in 2030 AM; LOS F in 2020 and in 2030 PM;
- Congress Avenue and Lake Worth Road- LOS E in 2020 and LOS F in 2030 AM; LOS F in 2020 and in 2030 PM;
- Military Trail and Melaleuca Lane- LOS E in 2020 and in 2030 AM; LOS F in 2020 and in 2030 PM; Kirk Road and Melaleuca Lane- LOS F in 2030 PM;
- Congress Avenue and Melaleuca Lane- LOS F in 2020 and 2030 AM; LOS F in 2020 and in 2030 PM;

Areas of Speeding Concern

- 10th Avenue N between Kirk Road and S. Congress Avenue (4 mph over posted speed limit)
- S. Congress Avenue between Forest Hill Boulevard and Summit Boulevard (8 to 11 mph over posted speed limit)
- Dolan Road between S. Congress Avenue and Kirk Road (11 to 19 mph over posted speed limit)
- Davis Road between Greenbrier Drive and 10th Avenue N (6 to 11 mph over the posted speed limit)
- Lake Worth Road between Kirk Road and S. Congress Avenue (6 to 8 mph over the posted speed limit)
- Lillian Road between S. Congress Avenue and Davis Road (10 to 13 mph over the posted speed limit)
- Lorene Drive (8 to 10 mph over the posted speed limit)

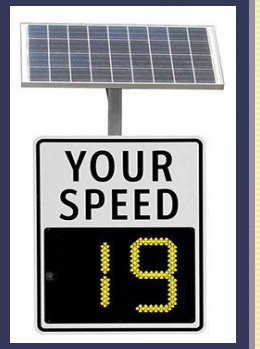
Overall Road Segment Crash Rankings

- Alemeda Drive- Military Trail to Congress Avenue: 27.42 Crash Rate
- Gun Club Road- Military Trail to Kirk Road: 15.31 Crash Rate
- Summit Blvd.- Military Trail to Kirk Road: 15.19 Crash Rate
- Kirk Road- 10th Avenue to Lake Worth Road: 13.80 Crash Rate
- Kirk Road- Lake Worth Road to Melaleuca Lane: 12.75 Crash Rate
- Kirk Road- Summit Blvd. to Forest Hill Blvd.: 12.71 Crash Rate
- Summit Blvd.- Between Congress Avenue to Florida Mango Rd: 12.47 Crash Rate
- Kirk Road- Forest Hill Blvd. to Greenbrier Drive: 11.41 Crash Rate
- Davis Road- Summit Blvd. to Alemeda Drive: 10.40 Crash Rate
- Congress Avenue- 10th Avenue to Lake Worth Road: 9.83 Crash Rate

Overall Road Segment- Fatalities

- Military Trail- Southern Blvd. to Forest Hill Blvd- 8 fatalities
- Lake Worth Road- Military Trail to Davis Road- 5 fatalities
- Military Trail- Forest Hill Blvd to 10th Avenue- 5 fatalities
- Forest Hill Blvd.- Between Congress Road to I-95- 4 fatalities
- Forest Hill Blvd.- Military Trail to Congress Road- 3 fatalities
- Melaleuca Lane- Congress Avenue to I-95- 3 fatalities

Overall Road Segment- Bicycle and Pedestrian Crashes



- Military Trail- Southern Blvd. to Forest Hill Blvd- 28 bike and pedestrian crashes
- Lake Worth Road- Military Trail to Davis Road- 26 bike and pedestrian crashes
- Congress Avenue- 10th Avenue to Lake Worth Road- 25 bike and pedestrian crashes
- Military Trail- Forest Hill Blvd to 10th Avenue- 24 bike and pedestrian crashes
- Forest Hill Blvd.- Military Trail to Congress Road- 20 bike and pedestrian crashes
- Lake Worth Road- Congress Avenue to I-95- 15 bike and pedestrian crashes
- Melaleuca Lane- Military Trail to Davis Road- 14 bike and pedestrian crashes
- Congress Avenue- Forest Hill Blvd. to 10th Avenue- 13 bike and pedestrian crashes
- Forest Hill Blvd.- Between Congress Road to I-95- 13 bike and pedestrian crashes
- 10th Avenue- Military Trail to Davis Road- 13 bike and pedestrian crashes

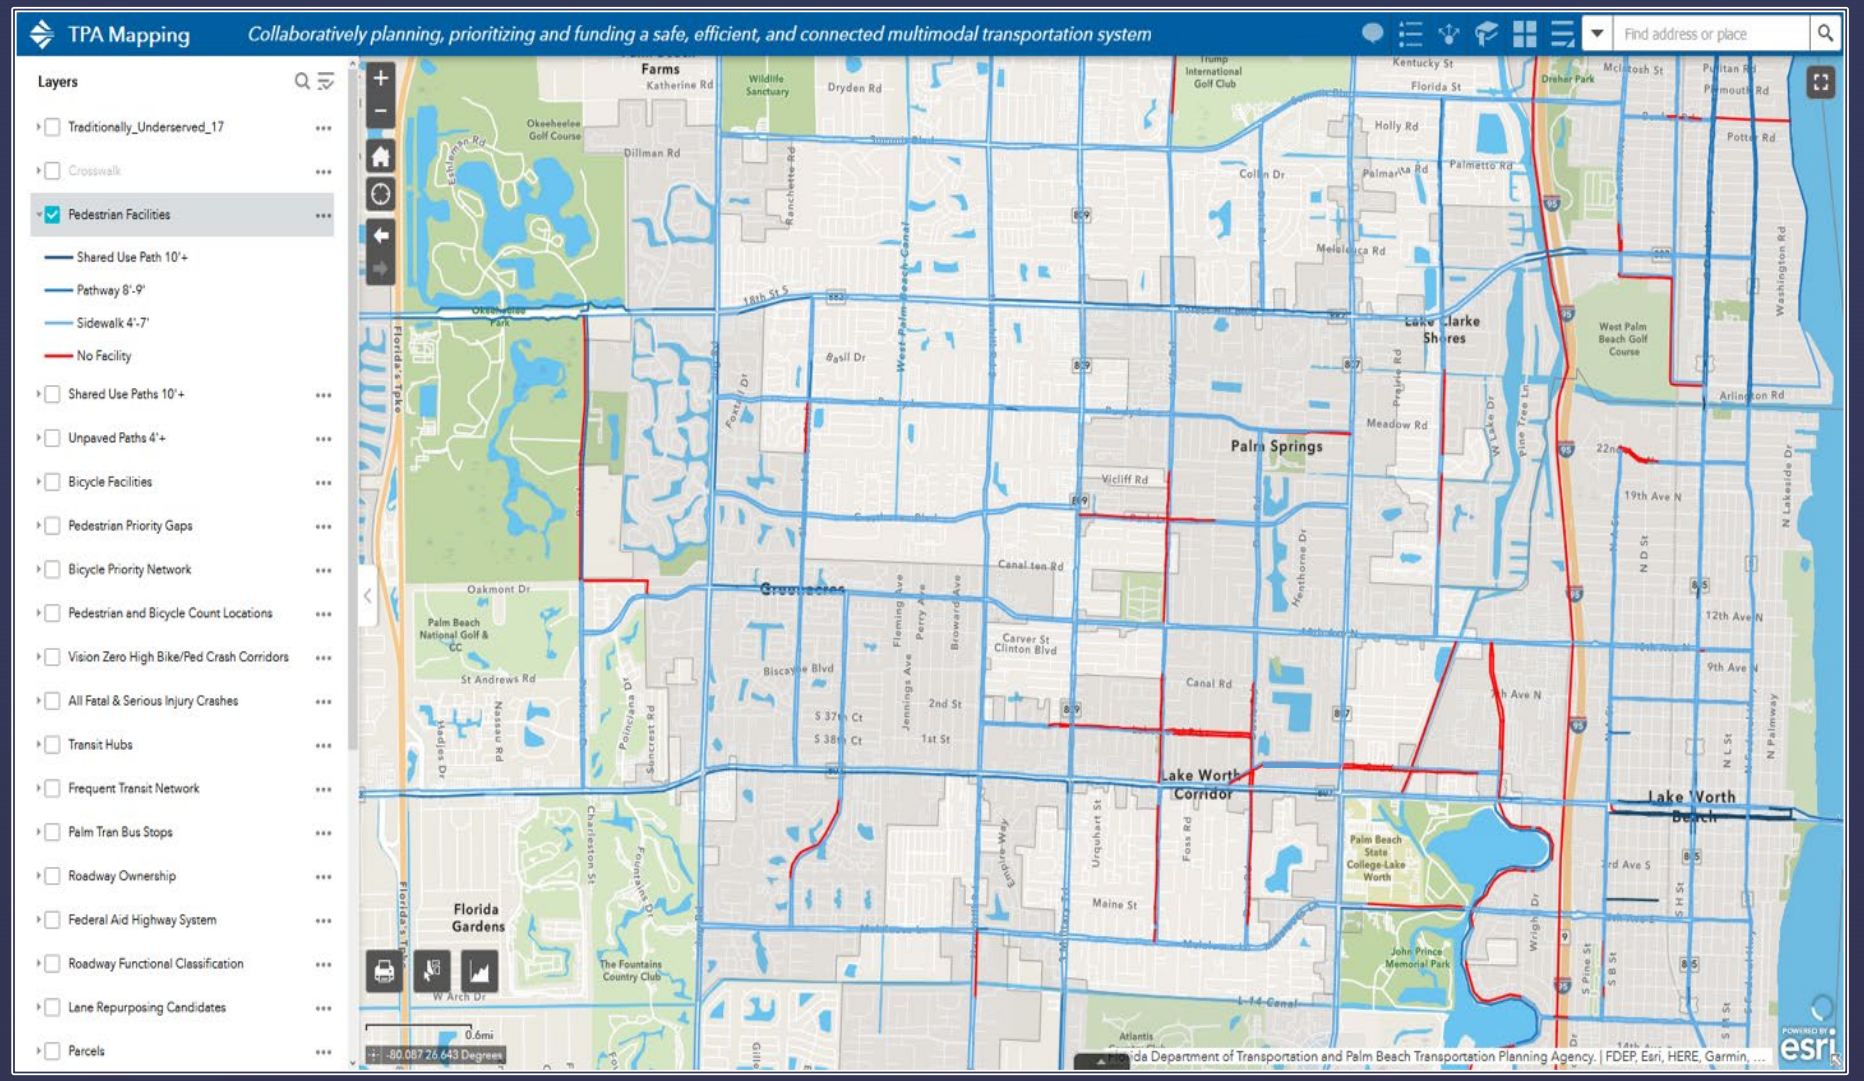
Traffic Operational Improvements- Intersections

Traffic Operational Improvements- Intersections			
Number	Intersection Name	Peak Period	Scope of Mitigation Improvements
1	Military Trail and Gun Club Road	AM	Addition of dual eastbound and westbound left turn lanes; addition of eastbound right turn lane; addition of northbound right turn lane; traffic signal timing optimization
2	Kirk Road and Gun Club Road	AM	Addition of eastbound right turn lane; traffic signal timing optimization
3	Congress Avenue and Summit Blvd	Both	Addition of eastbound and westbound dual left turn lanes; traffic signal optimization
4	Congress Avenue and Forest Hill Blvd	Both	Addition of northbound, eastbound and westbound right turn lanes; traffic signal timing optimization
5	Military Trail and Lake Worth Road	Both	Addition of a southbound and eastbound righ turn lane; traffic signal optimization
6	Congress Avenue and Lake Worth Road	Both	Addition of a dual southbound left turn lane; traffic signal optimization
7	Congress Avenue and Melaleuca Lane	Both	Addition of eastbound and westbound through lanes; addition of a southbound through lane; traffic signal timing optimization
8	Military Trail and Summit Blvd	PM	Addition of dual northbound and southbound left turn lanes; traffic signal timing optimization
9	Military Trail and Forest Hill Blvd	PM	Addition of northbound /southbound dual left turn lanes; addition of a northbound and southbound right turn lanes; traffic signal optimization
10	Kirk Road and Forest Hill Blvd	PM	Addition of dual eastbound/westbound left turn lanes; addition of eastbound/westbound right turn lanes; traffic signal timing
11	Military Trail and 10th Avenue	PM	Addition of northbound, eastbound and westbound right turn lanes; traffic signal timing optimization
12	Congress Avenue and 10th Avenue	PM	Addition of northbound right turn lane; traffic signal timing optimization
13	Florida Mango Road and 10th Avenue	PM	Addition of dual eastbound and westbound left turn lanes; traffic signal timing optimization
14	Kirk Road and Melaleuca Lane	PM	Addition of eastbound right turn lane; traffic signal timing optimization
15	Kirk Road and Lakewood Road	Both	Conversion from traffic signal to Roundabout if feasible
16	Davis Road and 2nd Avenue North	Both	Conversion of all way stop to Roundabout if feasible

Traffic Calming Improvements- Road Segments/Intersections

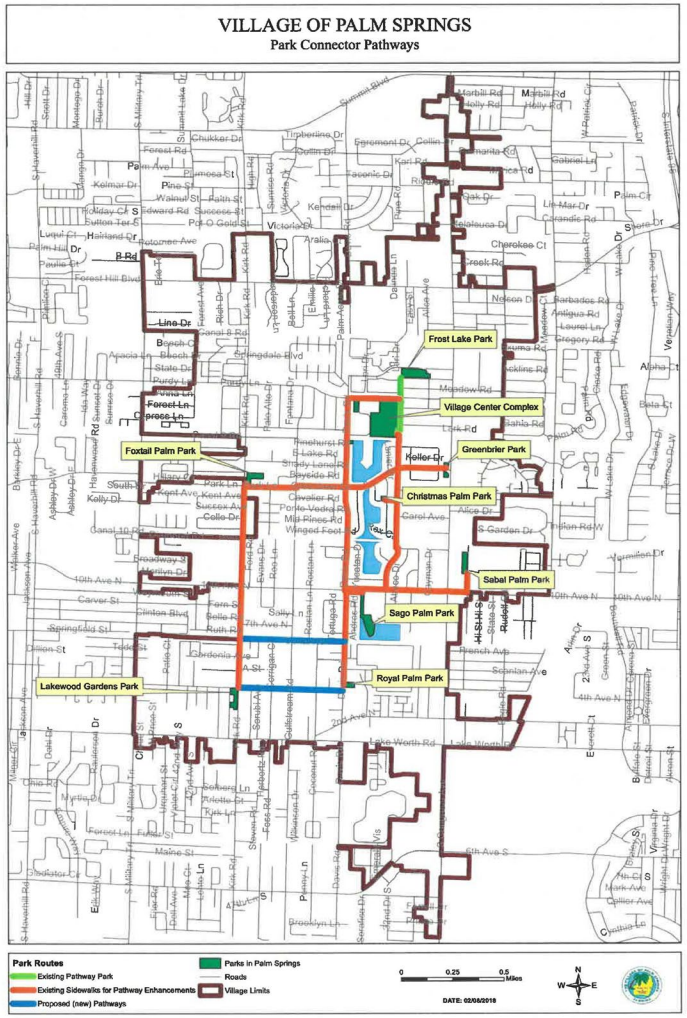
Traffic Calming Improvements- Road Segments/Intersections			
Number	**Road Segment/Intersection Name**	**Year**	**Scope of Mitigation Improvements**
1	10th Avenue- Between Kirk Road and Congress Avenue	2020	Installation of speed radar signs pending traffic study approval
2	Congress Avenue- Between Forest Hill Blvd and Summit Blvd	2020	Installation of speed radar signs pending traffic study approval
3	Alemeda Drive- Between S. Congress and Kirk Road	2020	Evaluate a neighborhood traffic circle at Davis Road and Alemeda Drive; Evaluate speed tables along Alemeda Drive
4	Davis Road- Between Green Briar Drive and 10th Avenue N	2020	Evaluate a neighborhood traffic circle at Davis Road and Riverdale Road or Winged Foot Road; Evaluate speed tables along Davis Road
5	Lake Worth Road- Between Kirk and S. Congress Avenue	2020	Installation of speed radar signs pending traffic study approval
6	Lillian Road- Between Congress Avenue and Lori Drive	2020	Evaluate speed tables along Lilian Road
7	Lorene Drive east of Congress Avenue	2020	Evaluate speed tables along Lorene Drive
8	Melaleuca Lane- Between Kirk Road and Davis Road	2020	Installation of speed radar signs pending traffic study approval
9	Park Lane/Greenbrier Drive- Between Kirk Road and Congress Avenue	2020	Evaluate neighborhood traffic circles at the intersections of Davis Road and Gulfstream Road; Evaluate speed tables on Greenbrier Drive

Important note: On neighborhood streets and minor roadways, the neighborhood is responsible, per Village code as it relates to traffic calming benefits, for providing the study and for the actual improvement, and must provide the recommendations and design schematics for permit review.



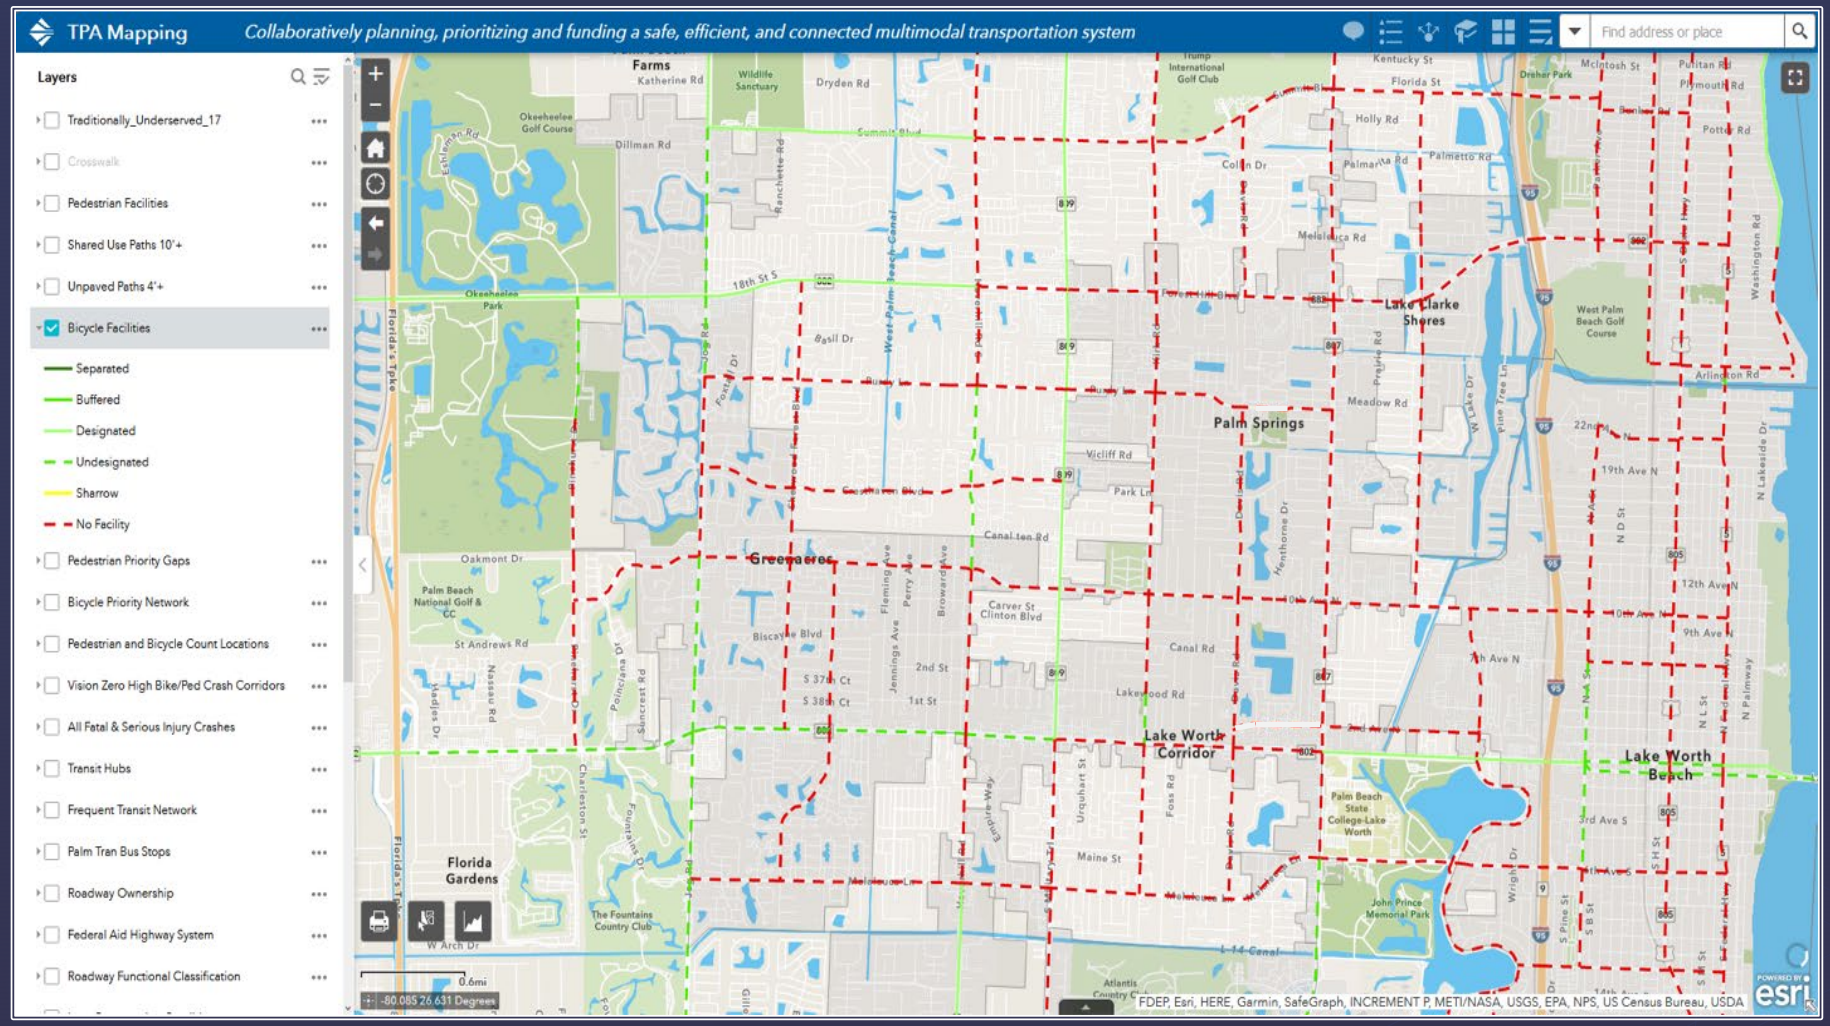
Safety Improvements- High Crash Locations

Safety Improvements- High Crash Locations			
Number	Road Segment/Intersection Name	Year	Scope of Safety Improvements
1	Alemeda Drive- Military Trail to Congress Avenue	2021	Perform Corridor Safety Study to mitigate for high crash location
2	Gun Club Road- Military Trail to Kirk Road	2021	Perform Corridor Safety Study to mitigate for high crash location
3	Summit Blvd.- Military Trail to Kirk Road	2021	Perform Corridor Safety Study to mitigate for high crash location
4	Kirk Road- 10th Avenue to Lake Worth Road	2021	Perform Corridor Safety Study to mitigate for high crash location
5	Kirk Road- Lake Worth Road to Melaleuca Lane	2021	Perform Corridor Safety Study to mitigate for high crash location
6	Kirk Road- Summit Blvd. to Forest Hill Blvd.	2021	Perform Corridor Safety Study to mitigate for high crash location
7	Summit Blvd.- Between Congress Avenue to Florida Mango Rd	2021	Perform Corridor Safety Study to mitigate for high crash location
8	Kirk Road- Forest Hill Blvd. to Greenbrier Drive	2021	Perform Corridor Safety Study to mitigate for high crash location
9	Congress Avenue- 10th Avenue to Lake Worth Road	2021	Perform Corridor Safety Study to mitigate for high crash location; high pedestrian and bicycle crash



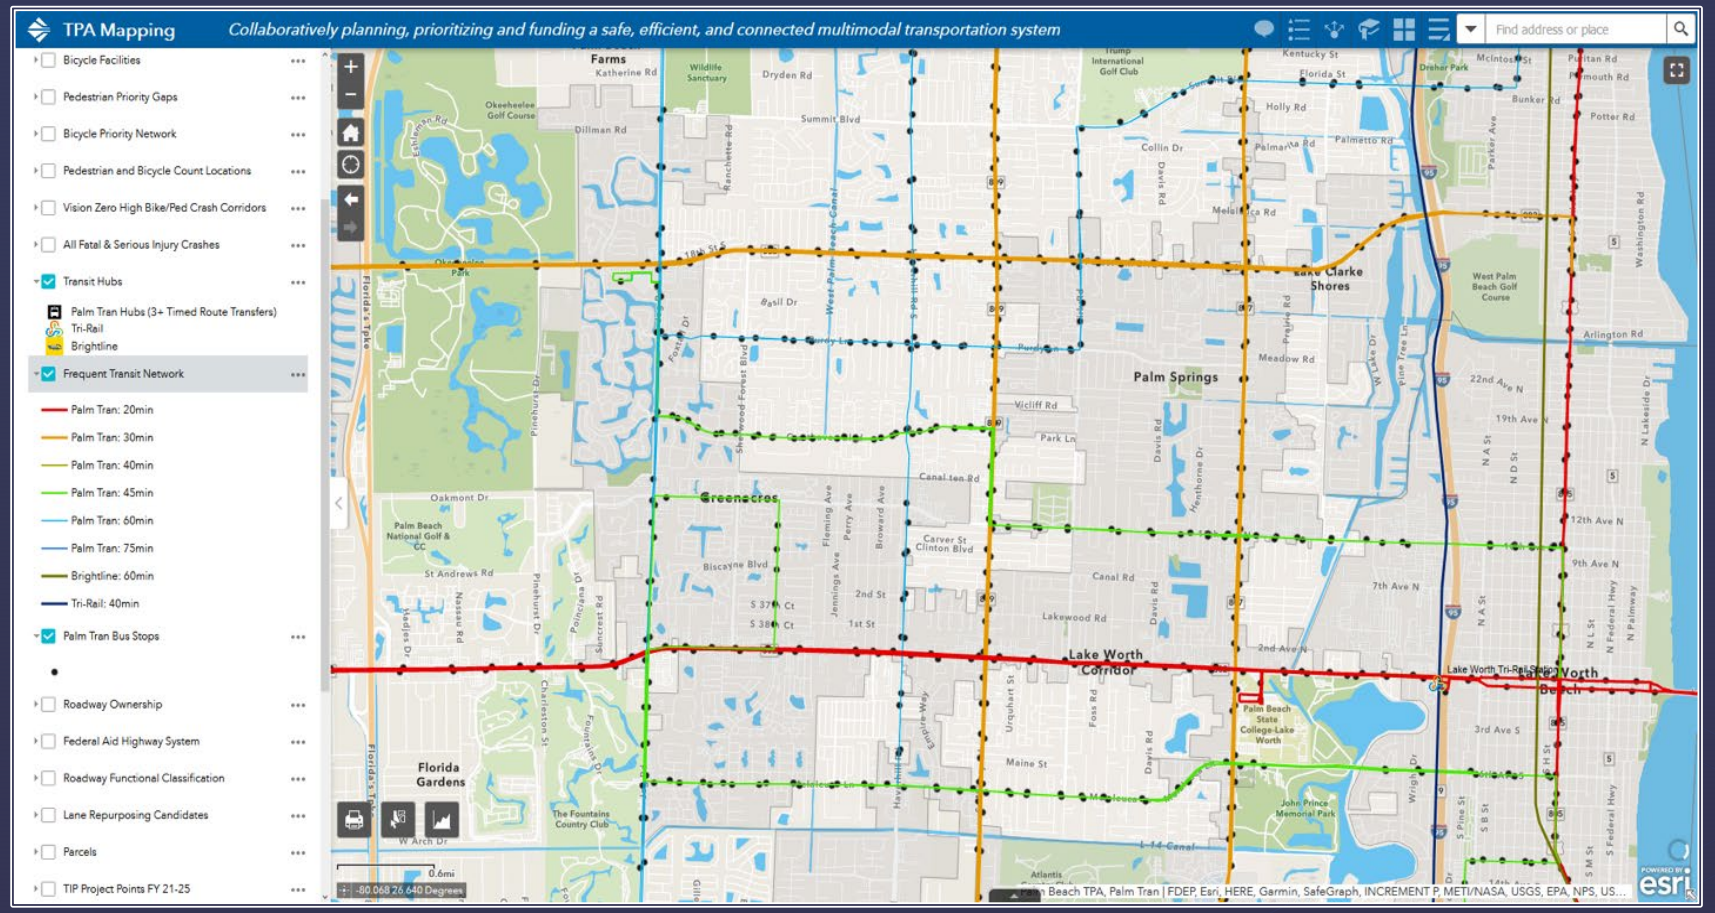
Safety Improvements- Bicycle and Pedestrian Crashes

Safety Improvements- High Bicycle and Pedestrian Crashes			
Number	Road Segment/Intersection Name	Year	Scope of Safety Improvements
10	Congress Avenue- 10th Avenue to Lake Worth Road	2021	Perform Corridor Safety Study to mitigate for high crash location; high pedestrian and bicycle crash
11	Military Trail- Southern Blvd. to Forest Hill Blvd	2021	Perform Corridor Safety Study to mitigation pedestrian and bicycle crash location
12	Lake Worth Road- Military Trail to Davis Road	2021	Perform Corridor Safety Study to mitigate for high pedestrian and bicycle crash location
13	Military Trail- Forest Hill Blvd to 10th Avenue	2021	Perform Corridor Safety Study to mitigate for high pedestrian and bicycle crash location
14	Forest Hill Blvd.- Military Trail to Congress Road	2021	Perform Corridor Safety Study to mitigate for high pedestrian and bicycle crash location
15	Lake Worth Road- Congress Avenue to I-95	2021	Perform Corridor Safety Study to mitigate for high pedestrian and bicycle crash location
16	Melaleuca Lane- Military Trail to Davis Road	2021	Perform Corridor Safety Study to mitigate for high pedestrian and bicycle crash location
17	Congress Avenue- Forest Hill Blvd. to 10th Avenue	2021	Perform Corridor Safety Study to mitigation pedestrian and bicycle crash location
18	Forest Hill Blvd.- Between Congress Road to I-95	2021	Perform Corridor Safety Study to mitigation pedestrian and bicycle crash location
19	10th Avenue- Military Trail to Davis Road	2021	Perform Corridor Safety Study to mitigate for high pedestrian and bicycle crash location



Pedestrian Network

Planned Park Connector Pathways



Bicycle Network

Red = No facilities

Transit Routes

Pedestrian and Bicycle Facilities

Summary

- Evaluation approach looked at “Level of Stress” – different methodology to account for comfort
- Bicycle and Pedestrian facilities have widespread gaps that serve as candidates for system completion
- Grid has a lack of N-S and E-W parallel paths that make implementation of alternatives difficult
- Future facilities development should include Complete Streets and Vision Zero – Village’s policies will need revision
- System has potential to be more age friendly
- Recreational system is easier to implement. Commuter based system on major roadways such as Congress Avenue have issues with available right of way.

Pedestrian and Bicycle Facilities

- Park Connector network should serve as in initial “grid” for implementation.
- Subsequent pathways should be completed on a block by block or section by section basis emanating from this network, with priority for first and last mile connectivity to transit.
- Bicycle routes should be “offset” from arterials and focused on Village collector and local roads.
- East – West Connectors
  - Separated facilities would be needed on roadways like Lake Worth Road, which has no space unless lanes are reduced or ROW is acquired
  - Alternatives – Prioritize bicycle and mixed-use pathways along canals or roadways like Greenbrier Drive
- North-South Connectors
  - Similar issues as East – West Connectors with space (example, Congress Avenue)
  - Bicycle and mixed-use pathways will require new pedestrian bridges like the one on Henthorne Drive that connects to Village facilities
  - Davis Road and Kirk Road are better candidates than regional arterials for implementing bicycle paths

Transit Recommendations

- Focus on existing Palm Tran Routes and “first-last mile” connectivity (Pedestrian and Bicycle projects)
- Local circulator – **wait**, but set up policy framework for
  - Developer Contributions
  - Draft pilot program for if monies are available
  - Pilot program, given size and population, should be geared toward small, on-demand shuttles

Prioritization Criteria

- Complete Streets Implementation/Network Completion
  - Prioritize 1st and last mile connections to transit
  - Prioritize infill of gaps
- Relieves Congestion/Improves Traffic Operations
- Effect on Safety
- Addresses Level of Stress issues
- Cost/Cost Effectiveness
- Ease of Implementation

DESCRIPTION:

An 18.00 foot wide strip of land lying within a portion of Tract P–1, SPRINGDALE HOMES, according to the Plat thereof as recorded in Plat Book 36, Page 167 of the Public Records of Palm Beach County, Florida. Being more particularly described as follows:

COMMENCING at the Northwest corner of said Tract P–1; Thence South 00°01'01" East (as a basis of bearings) along the West line of said Tract P–1, a distance of 10.00 feet to a point being on the South line of the Water Supply and Utility Easement, as recorded in Official Records Book 2578, Page 1659 of the Public Records of Palm Beach County, Florida & Official Records Book 2826, Page 543 of the Public Records of Palm Beach County, Florida and the POINT OF BEGINNING;

Thence continue South 00°01'01" East along the West line of said Tract P–1, a distance of 58.00 feet; Thence North 89°58'59" East, a distance of 18.00 feet to a point being on a line lying 18.00 feet East of and parallel with (as measured at right angles) the West line of said Tract P–1; Thence North 00°01'01" West along said parallel line, a distance of 58.00 feet to a point being on the South line of said Water Supply and Utility Easement; Thence South 89°58'59" West along the South line of said Water Supply and Utility Easement, a distance of 18.00 feet to the POINT OF BEGINNING.

Said lands situate, lying and being in Section 18, Township 44 South, Range 43 East, Village of Palm Springs, Palm Beach County, Florida.

Containing 1,044 square feet.

CERTIFICATION:

I HEREBY CERTIFY that the attached Sketch and Description of the hereon described property is true and correct to the best of my knowledge and belief as prepared under my direction. I FURTHER CERTIFY that this Sketch and Description meets the Standards of Practice set forth in Chapter 5J–17.050 through 5J–17.052, Florida Administrative Code, pursuant to Section 472.027, Florida Statutes.

SURVEYOR'S NOTES:

1. BEARINGS DEPICTED HEREON ARE BASED UPON THE WEST LINE OF TRACT P-1, SPRINGDALE HOMES, ACCORDING TO THE PLAT THEREOF AS RECORDED IN PLAT BOOK 36, PAGE 167 OF THE PUBLIC RECORDS OF PALM BEACH COUNTY, FLORIDA. SAID LINE HAVING A BEARING OF SOUTH 00°01'01" EAST AS DEPICTED ON SAID PLAT.
2. THE UNDERSIGNED MAKES NO REPRESENTATIONS OR GUARANTEES AS TO THE INFORMATION REFLECTED HEREON PERTAINING TO EASEMENTS, RIGHTS OF WAY, SETBACK LINES, AGREEMENTS AND OTHER MATTERS, AND FURTHER, THIS INSTRUMENT IS NOT INTENDED TO REFLECT OR SET FORTH ALL SUCH MATTERS. SUCH INFORMATION SHOULD BE OBTAINED AND CONFIRMED BY OTHERS THROUGH APPROPRIATE TITLE VERIFICATION.
3. LANDS SHOWN HEREON WERE NOT ABSTRACTED FOR RIGHTS OF WAY AND/OR EASEMENTS OF RECORD.
4. THE LICENSED BUSINESS NUMBER FOR DENNIS J. LEAVY & ASSOCIATES INC. IS LB #6599, THE CERTIFYING SURVEYORS (DAVID A. BOWER) LICENSE NUMBER IS LS #5888.
5. THIS IS NOT A SURVEY.
